■The suffix "M" in A725M, A750M, and A750DAM identifies extremely sensitive controls **with sensitivity adjustment** that operate with very short light change. The "M" type controls have been developed for operation by photo sensors that have the **"5A Feature"** described on the opposite page. This combination is used for scanning register marks, for sensing fast moving objects and other applications where light change is short. **Sensors with the 5A Feature are also used where the sensing head is exposed to high temperature.**

A750DA Extra Fast Timed Output Pulse Width Control

Timing Ranges same as A750

The Control Relay of the A750DA energizes instantaneously with adequate light change and de-energizes at expiration of pre-set timing period as follows:

With LIGHT Terminal connection the control relay energizes instantly when the cell receives enough light; remains energized even though the cell goes **dark** and de-energizes when the Timing Period expires, except: while the relay is energized, if the cell goes **DARK and then goes LIGHT** before the Timing Period expires the relay remains energized **and a NEW Timing Period starts.**

With DARK terminal connection, DARK on the cell produces the same relay action as LIGHT does in the above.

Timing and Sensitivity Adjustments are inside cabinet.
Adjustable time delay repeat accuracy 1%. Time Delay adjustment has shaft lock.

Power consumption, 25 VA.

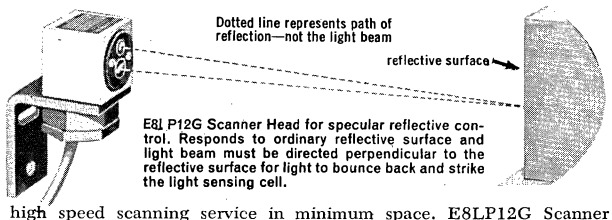
E8LP12G Specular Reflective Scanner Head



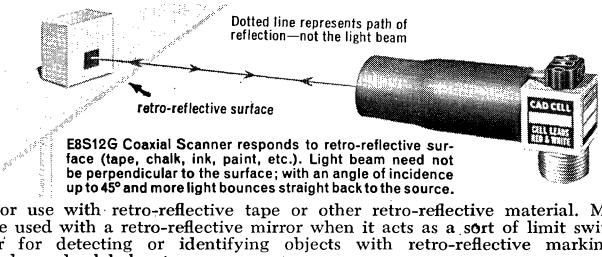
E8LP12G Scanner Head for specular reflective control. Responds to ordinary reflective surface and light beam must be directed perpendicular to the reflective surface for light to bounce back and strike the light sensing cell.

For high speed scanning service in minimum space. E8LP12G Scanner Head combines the fast acting cadmium selenide cell and the light source lamp in a single miniature housing (approximately ⅞ inch in all three dimensions plus ⅜" male pipe thread connection. See dimensional diagram below.)

The light sensing element is a fast response, cadmium selenide cell. The lamp has a built-in lens. An infrared filter helps protect against ambient light. The lamp rating is 2.5 volts at .5 amperes-life expectancy up to 75,000 hours depending on operating voltage.

E8LP12G Scanner Head including mounting bracket, also 6-foot factory-connected cable with cable grip and seal for connecting to 800 control. **$28.75**

E8S12G Retro-Reflective Scanner Head



E8S12G Coaxial Scanner responds to retro-reflective surface (tape, chalk, ink, paint, etc.). Light beam need not be perpendicular to the surface; with an angle of incidence up to 45° and more light bounces straight back to the source.

For use with retro-reflective tape or other retro-reflective material. May be used with a retro-reflective mirror when it acts as a sort of limit switch or for detecting or identifying objects with retro-reflective markings, code marks, labels, etc.

The light beam does not need to be perpendicular to the retro-reflective surface; beams at angles up to 15° and more (depending on conditions) bounce straight back to the cell.

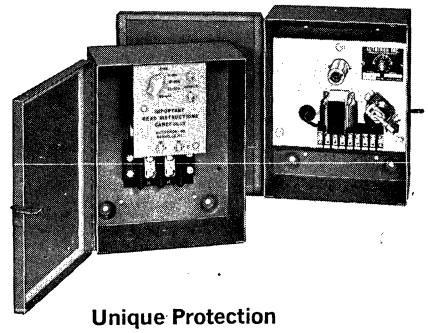
Current Surge Overload Protection



Unique Protection for tools, equipment, personnel

The Surj-Switch uses electronic amplification for instant reaction to variations from normal load current. Easily adjusted on the job to operate at the desired value.

The 10-amp, SPDT Control Relay may operate a warning signal, a lubricating circuit, feeding rate control, etc. without interrupting operation or may be used to stop operation.

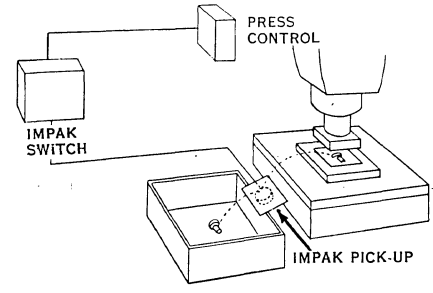
Used on surface grinders to warn when excessive pressures are applied; on machine tools to warn when tools become dull; on automated installations; **whenever load change indicates trouble.**

Model K1 Surj-Pick-up. Required for operation of Surj-Switch Controls—for 50-60 cycle, 0 to 80 amperes, one or 3-phase, any voltage..**$35.00**

Model J Surj-Switch. For overloads,.....**$55.00**

Model JA Surj-Switch. For under loads....**$65.00**

Impak-Switch Die Protection



In the above diagram each piece properly ejected from the die strikes the impact sensing plate which actuates the Impak Control and the Control re-cycles the press control for another stroke.

The impact of falling parts against the sensing plate of the Impak-Pick-up activates the Impak-Switch. Objects may be of practically any reasonably uniform size, ranging from ball bearings to heavy stampings, etc.

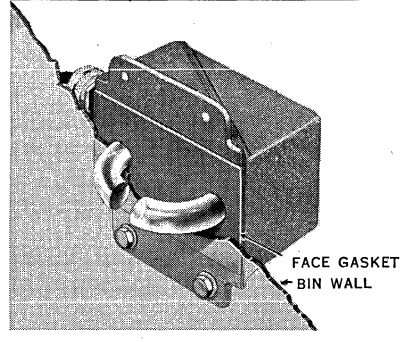
In other die protection applications the Impak Control has time delay set to barely exceed the complete stroke cycle of the press. Each properly ejected piece re-cycles the Impak Control before the timing period expires.

Model V Impak-Pick-up—with 6-ft. shielded plastic-covered cable.....**Net $30.00**

Model Z Impak-Switch—for use where impact is not less than one ounce falling 2 inches and each object strikes only once.....**Net $60.00**

Model C3 Impak-Switch—for use where impact force is limited, where high speed is required or where objects may strike more than once. **Net $145.00**

Tubeless Bin Level Control



Tubeless Photoelectric actuation—unaffected by pressure of material in the bin. Only rigid, non-moving Lucite probes project into the bin. Cast aluminum, gasket-sealed housing mounts to bin wall as shown. Removal of cover makes all parts accessible. Dust-covered plug-in DPDT 8-ampere relay provides ON/OFF control for either high or low bin level. All wiring connections brought out of case in 3-foot oil-proof cable. For 115/230V, 50-60 C.

A700—Relay operates from cad cell output, light-energized. Power Consumption, 10 watts. .....**Net $68.00**

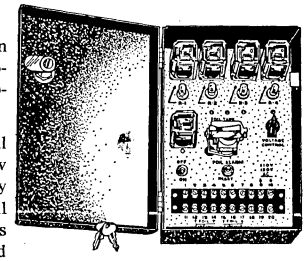
THE WORNER MASTER CONTROL SYSTEM

MODEL 9000 SERIES



Consists of Model 9000-S Master Control Panel. Can supervise ONE to FOUR Light Source and Photocell detection sets, hereafter referred to as "Fotoelectric Sets".

On separate circuit, the Master Control Panel will also supervise foil tape, door traps and window switch systems. Both circuits operate independently and simultaneously. Sounds continuous alarm (until reset) when either of these detection circuits is opened or wiring of Fotolectric system is tampered with.

This control panel prevents false alarms should power fail or drop momentarily and resets automatically when power is restored. Also operates with any type electrical devices employed by professional burglar alarm companies.

The unit contains Relays which energize alarm circuits. The cabinet size is 7" x 10¼" x 4⅜" and its operation is safeguarded by a pick-proof lock. The unit is installed remotely. Designed for 110/120v. 50/60 cy. a.c.

Illustration shows FOUR Relay plug-in location for 1, 2, 3 and 4 Relays as needed; one Relay for each Fotolectric (detection) Set used. Model 9000-S Master Control Panel is priced "less Relays," as only ONE Relay is automatically supplied with each Model No. 9000 series Fotolectric Set ordered.

The lens cap is effectively lighted by T-1¾ bulb with midget flanged base, which extends completely into the luminous portion. Fine solid color effects are obtained. The two-part construction permits opaque sides with lighted colored faces.

Lens caps may be rotated, permitting legends or cap edges to be easily brought into alignment after installation of the assembly; or they may be keyed, thus permitting them to be pushed into place only in a **predetermined** position.

Unique anti-rotation (locked) construction provides for secure keyed mounting of mounting bushing on panels.

In these Oil-Tight Indicator Lights, a high degree of resistance to shock and vibration is achieved by the use of the rugged *Neon* lamps on 120 and 240 V; and by choosing low voltage *Incandescent* lamps with short filaments, such as No. 44 or No. 1866 for circuits powered by transformers stepping down to 6.3 V.

Exclusive Features: Assemblies for use with BIA(NE51) Neon Glow Lamps have *"built-in"* resistors—an exclusive *Dialco* feature (U.S. Pat. No. 2,421,321). *Options include:* binding screw, soldering or quick connect terminals. 7 lens colors are available; see bottom of page 972 for method of specifying color.

R — LITES

R-Lites are Eldema's product family of relampable holders and lens caps for the midget flange based T-1 ¾ incandescent and T-2 neon bulbs. The lamps and lens caps are replaceable from the front of the panel. There are five R-Lite groups — each with its own features — the holder and lens cap part numbers in each group start with the same two letters to insure mating parts.

RM AND RN SERIES

The RM-RN groups meet MIL-L-3661. The RM is for incandescent lamps — the RN Series with a built in resistor is for neon lamps. Standard types RMA and RNA — waterproof types RMW and RNW — two tin plated lug terminals — black anodized aluminum cases — high impact plastic lenses. Mount from the front in 15/32″ holes. Equivalent Military numbers are listed.

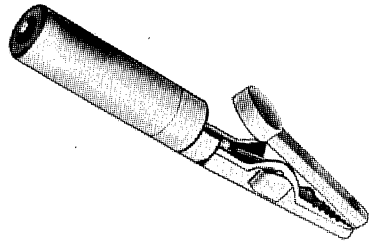
TEST ACCESSORIES



SAFE-T-KLIP

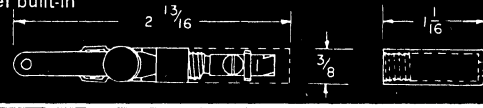
Many models are available to offer a practical solution to the problem of protecting valuable test equipment against accidental shorts or contact with power leads. Thoroughly insulated with tough nylon, they provide safe operation in excess of 600 volts—yet retain their design ability to reach hard-to-get-to recesses common to all electronic chassis.

Safe-t-klip supplied packaged in pairs. Pair is one red, one black.

- Absolute protection from shocks or shorts
- Meets military requirements
- Clips are cadmium plated steel
- U.S. Patent No. 2,754,490

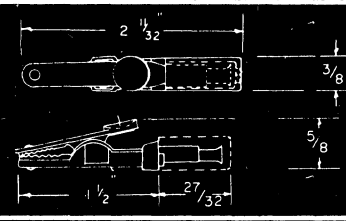
MODEL B1410A—for lead wires

- Provision for mechanical or solder joint with test wires
- Strain relief built-in



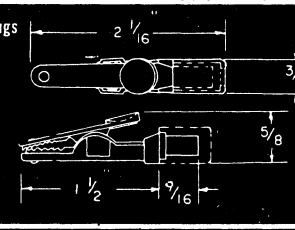
MODEL B1410B—for test prod

- Use in conjunction with standard .080" test prods
- Threaded entrance hole assures positive connection—will not slide off prod



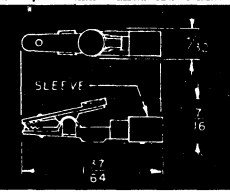
MODEL B1410C—for standard banana plugs

- Provision for positive electrical connection with standard banana plugs.



B1410M—MINIATURIZED For Test Leads

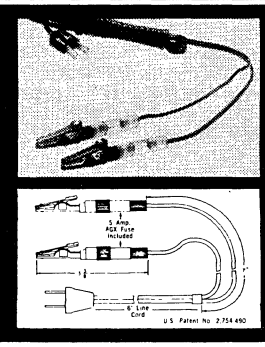
- For leads up to 22 AWG, solder joint
- Built-in strain relief



SAFE-T-KORD

MODEL 1480—for fused power protection

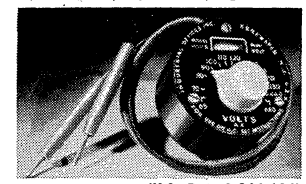
- Eliminate shorts and shocks —dangerous bare leads
- Protect equipment from burn out
- Apply line voltage to components not having line cords
- Thread-on clear Lexan housing for visual inspection and quick replacement of fuse
- Supplied complete with two 5 amp. fuses.



VOLTAGE TESTERS

Rugged, long-lasting. Completely eliminates conventional (and delicate) meter movements — test lamps ruggedized for toolbox use.

MINI-VOLT VOLTMETER Model #B400B



(U.S. Pat. 2,644,134)

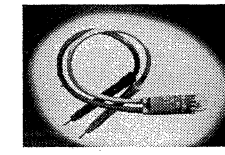
"Abuseproof" voltmeter, sufficiently accurate to indicate a 2 or 3 volt drop on 110 volt line. Virtually burn-out proof, unit has wide application for all equipment whose proper operation requires correct voltage. Used by electricians, radio and TV repairmen, refrigeration and air conditioning servicemen, experimentors, lab technicians, handymen.

In addition to measuring the exact voltage over the range from 65 to 660 volts, Model #400B is used to identify AC or DC lines, check rectifiers, filter capacitors, chokes; test for blown fuses, grounded components, DC polarity, measure voltage drops with load, and 1001 other uses.

For use on AC (any frequency) or DC, MINI-VOLT, with an impedance of approximately ½ megohm, draws negligible current and can therefore provide dependable voltage readings even on circuits used in electronic apparatus.

Provides lifetime of service — glow lamp is guaranteed for 25,000 hours of actual operation. Furnished complete with extra-heavy insulated 12-inch flexible test leads and test prods.

LINE-VOLT TEST LITE Model #1310

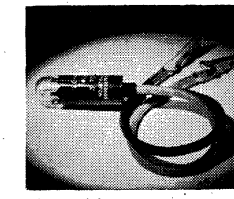


LINE-VOLT Model No. 1310 is a rugged, compact test light covering the wide range of 55-550 VAC or 90-600 VDC.

LINE-VOLT tells immediately whether there is power in the line, checks fuses, can identify AC or DC lines, grounded components, continuity of line circuits.

Leads are 12" long overall and are heavy-duty flexible wire terminating in 3½" insulated prods with really sharp points — able to pierce insulation, paint, or oxidation. Bright lamp provides immediate positive indication.

LO-VOLT TEST LITE Model #1300



LO-VOLT Test Lite No. 1300 is a compact test light for ready use in many applications.

Operating over a wide range of 3-28 volts AC or DC, LO-VOLT supplies the instant answer to whether there is an available power supply for thermostatic controls, model train equipment, other stepped-down AC voltages as well as battery supplies such as automotive.

A continuity tester when used in conjunction with a power supply to detect the presence of an open.

Completely enclosed so that lamp is not exposed. LO-VOLT is supplied with flexible leads terminating spring clips for ready tie-in to test circuit.

E. F. JOHNSON CO.

Pilot lights

E. F. Johnson pilot lights have been classified as "PREFERRED TYPES", and are immediately available at parts distributors throughout the country. Specials, including types meeting military specifications, are available in production quantities.

When ordering -1 indicates clear jewel (i.e. 147-1000-1); -2 transparent red; -3 transparent green; -4 transparent amber; -5 transparent blue; -6 opal. Green and blue not recommended for use with neon lamps. In pilot light sockets with built-in resistors for neon bulbs, higher resistance values give longer life; lower resistance values give greater brilliance.

MOUNTING HOLE DETAILS

RIB-LOC MINIATURE PRESS-IN INDICATOR LIGHT

New RIB-LOC light simply presses into place in a .312" diameter round hole. Typical push-in force in 1/16" thick aluminum panel is 15 lbs.; push-out force, 20 lbs.; torque to rotate, 32 oz. in. Ribs bite into sharp edges of hole to provide positive retention. Durable polycarbonate lens in six colors. Long-life incandescent bulb. Black polyamide housing. Terminations are 1/16" diameter terminals staked to body.

Polyamide spacers

These convenient polyamide spacer bushings make it possible to snap PC boards to a chassis and provide a choice of stand-off heights from .125" to .750". They provide mechanically secure, insulated mounting, yet PC boards can be quickly removed. Machined from nylon, the design provides permanent, snap-in insertion into pre-drilled or punched holes in any 1/16" chassis or panel. (Also available as specials for other panel and board thicknesses.) The other end of the spacer snaps in or out of the PC board so that the board can be removed for service or modification.

Beckman® HIGH VOLTAGE POWER SUPPLIES

PORTABLE HIGH VOLTAGE DC POWER SUPPLIES

These general purpose supplies are particularly suited for laboratory or production line use to provide a convenient source of high voltage, low current dc power. Widely used for such applications as powering photo-multiplier tubes, image intensifiers, condenser charging, and routine insulation breakdown testing.

Voltage readings are indicated by a 6" precision mirror scale kilovoltmeter of 1% accuracy. Polarity is reversible from the front panel (patent applied for). An ac input protection fuse is included as well as a built-in limiting ballast lamp restricting maximum current output levels. These levels may be adjusted by changing ballast. A single control allows continuous adjustment of output voltage from zero to maximum rated voltage.

The output is unregulated (regulation is 20% for 10 to 100% loading). Current rating is 5 milliamperes. The ripple is 5% (rms) at full voltage and current load.

Model	Output Voltage	Output Current	Price
6000-1ma-ms	0 to 1kV	5ma	$250.00
6000-5ma-ms	0 to 2.5kV	5ma	275.00

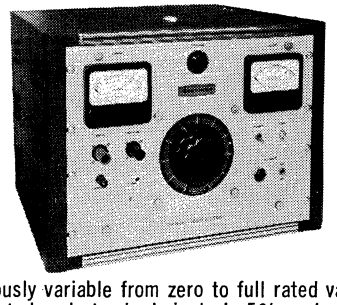
HEAVY DUTY DC POWER SUPPLIES



These industrial type power supplies are built for service and efficiency. All are of the transformer type and employ husky components that have been selected for their power handling capacity. Controls are arranged so that operation is simple and the units contain a number of safety features for protection of personnel and equipment. Output is continuously variable from zero to full rated values. These supplies are unregulated and standard ripple is 5% or less. Ripple of from 0.01% to 1%, and regulated supplies are available on special order. All power supplies have automatic overload cutout control circuits.

HIGH VOLTAGE SWITCHES

For high voltage, low current circuits requiring complete isolation; nominal rating 5,000 volts (D.C. or A.C.) Model A or D may be used in lower duty circuits to 10,000 volts D.C. Steady state current rating 500 milliamperes — 5Ma when switching. Isolated for 15,000 volts D.C. test to ground . . . made of modified Diallyl Phthalate. May be ganged together for 2 gang operations.

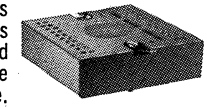
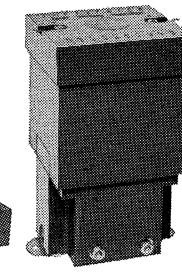
PACKAGED POWER SUPPLIED AND ZENER REGULATORS



ZENER REGULATOR



PACKAGED POWER SUPPLY

These new low-cost units make D.C. voltage problems easy. Just wire input and output connections and the unit is ready to operate. Building block construction provides a basic transformer, a rectifier unit, and where necessary a regulating device. These three elements bolt together quickly and maintenance is simplified should any of the components fail. Each of the three basic building blocks are mechanically constructed in a molded Diallyl Phthalate shell and encapsulated with epoxy resin.

The output is completely isolated and either post may be grounded or the unit operated as a floating supply. The D.C. voltage is filtered and provides 5% or less ripple. Output may be varied from full rating down to zero by simply inserting a small adjustable transformer in the input. Most units are rated for 5 MA current. Power supplies 7.5 KV and higher have modified mechanical construction from that described above. Input 115 V. 60 Hz.

Use with High Voltage Zener Regulators to obtain 1% line and load regulation.

Simply connect in parallel* with any high voltage power supply and automatically obtain line and load voltage regulation as well as ripple reduction. Nominal current rating is 0.5 to 1 MA for better than 1% stabilization. Regulation over range of 0 to 5 MA is 3%. Can be wired in series for high voltage service (five 4,000 volt types to regulate a 20,000 volt power supply). Twenty built-in taps included, each provides a regulated voltage to an accuracy of 20%. Ideal for photomultiplier tubes. Use as a high voltage reference in conjunction with regulator amplifier circuitry.

*If necessary, insert a series resistor to limit zener current to under 5 MA.

AC VOLTAGE STABILIZERS

For Electronic and Electric Equipment

NEW IDEAS IN ELECTRONICS

General Electric a-c voltage stabilizers are static-magnetic transformer-type products which provide voltage maintained within ±1% variation while input line voltage fluctuates ±15%. They are offered in the following variations:

Unfiltered output: output voltage waveform is relatively flat-topped, with harmonic content from 15 to 20%.

Harmonic filtered output: output voltage is filtered to near sinusoidal waveshape, with a maximum of 3% harmonic content.

Enclosed construction: completely metal enclosed for safe external mounting.

Open construction: for installation within electronic or electric equipment.

Cord/Receptacle units: for convenient temporary connections.

SINGLE PHASE — Magnetic-capacitor circuitry is frequency sensitive. Stabilizers designed for one frequency are not suitable for use on another.

THREE PHASE — Standard single-phase a-c voltage stabilizers can be connected for 3-phase, 4-wire loads with input connected delta. However, single-phase models cannot be connected for 3-phase, 3-wire loads: select from 3-phase delta-delta models.

STABILTRON* AC VOLTAGE STABILIZERS

NEW IDEAS IN ELECTRONICS

For Electronic and Electric Equipment Requiring PRECISE Voltage Control

General Electric Stabiltron a-c voltage stabilizers can be used in a wide variety of electronic equipment applications where precise control of voltage is required. The Stabiltron consists entirely of static components — there are no tubes to burn out or moving parts to replace or maintain.

The Stabiltron senses deviations from a predetermined output voltage level by an error detector. The error signal, through the silicon-controlled rectifier circuit, augments the voltage stabilizer action and provides almost instantaneous correction of output voltage.

Typical applications include computers, radar and communications equipment, industrial process control, and X-ray equipment.

Input Voltage — The most common power source voltages can be handled by the standard models listed. Stabiltron units can be provided for special voltage levels on request.

Output Voltage — Stabiltron voltage stabilizers maintain extremely precise voltage output in spite of wide fluctuations of line voltage, frequency, load, load power factor, and ambient temperatures.

The table below illustrates the effect on the output of the maximum steady state excursions, within rated limits of some of these variables.

TABLE 1 — TYPICAL OUTPUT VOLTAGE CHARACTERISTICS

Variable	Excursion	Output Voltage Bandwidth¶
Line voltage†	95 to 130	0.02 to 0.2%
Frequency	57 to 63 cycles	0.15 to 0.4%
Load	0 to 100% rated load	0.02 to 0.1%
Load power factor	0.4 lagging to unity	0.01 to 0.1%
Ambient temperature	−25C to 40C	0.01%/degree C

¶ A range is indicated because exact amounts are dependent on the static level of other variables.

† When the Stabiltron unit is operated at less than rated load, the line voltage can be reduced considerably below 95 volts without serious deterioration of the output voltage.

Response — Under transient line or load conditions, elapsed time for correction of output voltage and transient excursion from the normal bandwidth are key considerations to equipment operation.

The Stabiltron provides fast response and small transient excursion through its unique combination of solid state and magnetic circuitry.

§ The time required for the output to recover to normal bandwidth limits.

Harmonic Content — Under all rated ranges of line variation and most load conditions, the total harmonic content of the output wave form will not exceed three percent for a sine wave power source. Even under adverse conditions, when the power source is not a sine wave, the Stabiltron voltage stabilizer will correct the wave form to the load to approximately three percent harmonic content.

Rectifier-filter Loading — Since the output wave form is low in harmonic content, the Stabiltron voltage stabilizer can be connected successfully to a rectifier (capacitor input) filter load to the input of a d-c power supply having capacitor input filters.

REGULATED DC POWER SUPPLIES

NEW IDEAS IN ELECTRONICS

Improve Performance of Computers and Other Electronic Equipment

These component power supplies can be used in a wide variety of applications where relatively constant d-c voltage is required despite fluctuating line voltages. Computers, process control equipment, and electronic measuring devices are typical applications where demands for accuracy require constant regulation of voltage.

Performance-proved GE d-c power supplies can be designed to suit your needs for either 50- or 60-cycle power sources.

EFFECT OF INPUT VOLTAGE VARIATION

D-c power supplies can be designed for various input voltages and ranges. With all other variables constant, the output voltage will not vary more than ±1 percent for a change in input voltage over the rated range of 97 to 130 volts input.

EFFECT OF TEMPERATURE CHANGE

For every 40C change in the ambient temperature, the output voltage level will change approximately one percent.

EFFECT OF FREQUENCY

A change of one percent in frequency will change output voltage level approximately one and one-half percent.

ISOLATION

All d-c power supplies provide electrical isolation between the a-c power source and the d-c load.

POLARITY

GE d-c power supplies can be designed with the polarity you require. All standard units listed can be installed with either plus or minus grounded.

RIPPLE

Ripple levels of one percent RMS meet most requirements. However, other levels of ripple content can be designed into G-E power supplies.

EFFICIENCY

Efficiency ranges from 70 to 85 percent for normal output voltage levels. For unusually low output voltages or low power ratings, some decrease in efficiency may occur.

REGULATION

Load regulation characteristics depend on the rated output voltage and rated power level of the power supply.

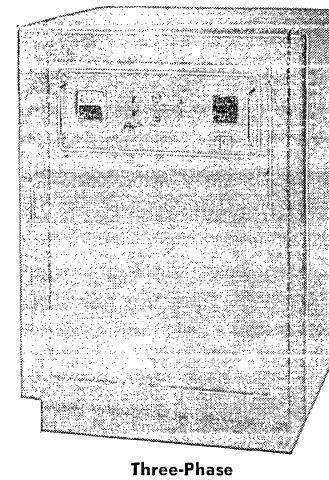
volt-pac® VOLTAGE REGULATORS

NEW IDEAS IN ELECTRONICS

- New solid-state control
- Precise output voltage control
- Fast voltage-correction rate
- Cabinet or rack-mounted models
- Magnetic circuit-breaker protection



Three-Phase

General Electric's new automatic voltage regulator line provides closely regulated output voltages from varying input voltages. They normally include a motor-operated Volt-Pac variable transformer, associated buck-boost transformers which handle a wide range of input-voltage variation, and a new solid-state SCR control.

These automatic regulators maintain a preselected output voltage level within 1 percent bandwidth, and are temperature compensated from −20 to +40C. They can be bench or floor mounted, or in smaller sizes, mounted in standard relay racks.

* 208-volt nominal output voltage operation requires no change in power connection, but does require selecting correct control transformer ratio. When operated at a nominal 208 volts output, the regulator will correct for an input range of 181 to 236 volts, with the output voltage adjustable from 199 to 217 volts.

† The specified input voltage range is applicable for nominal output voltage. When operating at any other output voltage within specified range, the input voltago range will change proportionately with the change in output voltage level selected.

‡ Load kva based on nominal output voltage.

No Waveform Distortion

No harmonic waveform distortion is introduced at any load or with any input voltage. The output voltage waveform is a precise reproduction of applied input waveform.

Adjustable Output Voltage

Output voltage for units nominally rated 115 volts is adjustable from 110 to 120 volts. Output voltage also is adjustable from 220 to 240 volts for units rated 230 volts; from 440 to 480 volts for nominally ratetd units of 460 volts. Please note that the specified input-voltage range is applicable for nominal output voltage. When operating at any other output voltage within specified range, the input voltage range shifts in proportion with the selected output voltage.

Accurate Static-sensing Control

Solid-state control combined with the new Sylvan-Kettler static-sensing device achieve the optimum in automatic accuracy. The voltage regulator is governed automatically by a dead-band-type voltage-sensitive control utilizing either lamp or zener bridges. The circuit includes magnetic input circuit breakers and an output voltmeter.

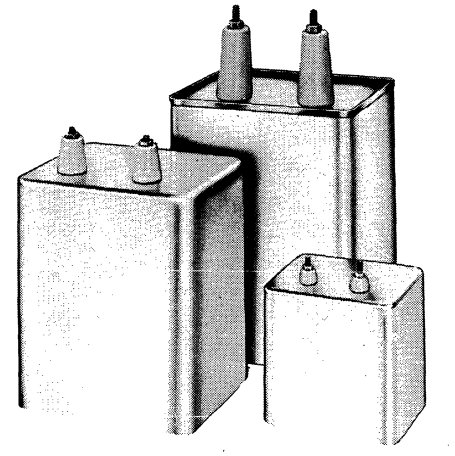
HIPOTRONICS HIGH VOLTAGE POWER PACKS



The Hipotronics wide range of compact miniaturized power packs with output voltages from 2 to 100 KV and current ratings of 2, 5 or 10 milliamperes are designed for long life and trouble free operation. Advanced high voltage techniques developed by Hipotronics permit greater size and weight reduction than previously possible.

All units are housed in a hermetically sealed MIL-T-27A can and vacuum filled with mineral type transformer oil or epoxy. The insulating medium insures corona-free operation and allows for running the supply at 3 or 4 times normal current rating for long periods of time. The corona free operation precludes component failure caused by long term corona degradation of insulation and guarantees a pure DC output free of any interfering high frequency signals which might possibly influence or affect the system which it is powering.

Every component in the supply is operated at well below its design rating and pre-assembly hipotted at one and one half times its operating voltage.

The output connections are high voltage ceramic type on models 30 KV and below and through plug in re-entrant receptacles for coaxial cables on greater than 30 KV units. Three foot cable assemblies are supplied with each re-entrant bushing type and longer ones are easily assembled if required.

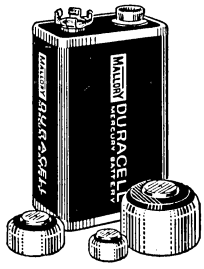
MALLORY Duracell® Batteries



MERCURY DURACELL BATTERIES

Mercury Duracell batteries offer more power per unit of volume than any other type. Sizes range from the RM312, which is aspirin tablet size, up thru the Power-Pak types. Voltage stability is excellent, as is storage life. Types with **R** in the suffix are rated at 1.35 volts per cell; all others rated 1.4 V. All have flat terminals unless otherwise noted. Types with suffix **T** have solder tab on negative terminal; suffix **T2** types have solder tabs on both terminals.

HIGH VOLTAGE POWER PACKS

COMPACT "M" SERIES 2 TO 75 KVDC

The "M" series Power Packs are a completely new design. Long life and a small package directed the use of the latest techniques and advanced materials. Many features have been incorporated with the highest quality materials, at the same time maintaining economy of cost.

Standard input voltage is 118 at frequencies from 50 to 500 cycles per second inclusive. Available also are input voltages of 220, 230 and 240 volts from 50 to 500 cycles per second inclusive. For 220 volts suffix the desired part number with "X", 230 volts "Y" and 240 Volts "Z". All units may be modified for other input voltages.

The output is filtered DC and standard potentials and current ratings are listed below. All units can be modified for any required potential and current below the values specified in the listing. The output potential can be varied from zero to the rated voltage and load by means of a variable auto transformer at the primary.

Ripple is 1% RMS or 2.75% peak to peak at rated current and voltage.

Design life is 40,000 hours at 35°C and 5,000 hours at 85°C.

Case finish is light blue gray lacquer per MIL-L-7178.

All units except the 75 KV, have two output terminals isolated from the container, permitting either terminal to be operated at ground or an intermediate point between them can be tied to ground. The 75 KV unit has a single high voltage terminal for the output. The Power Pack is normally furnished to deliver a positive output potential relative to ground. If a negative output is desired it can be shipped as such from the factory upon request. The polarity can be easily reversed as required by opening the top access port and reversing the selenium rectifier board. The remaining output terminal at low potential is left ungrounded so that the lead current be monitored if required.

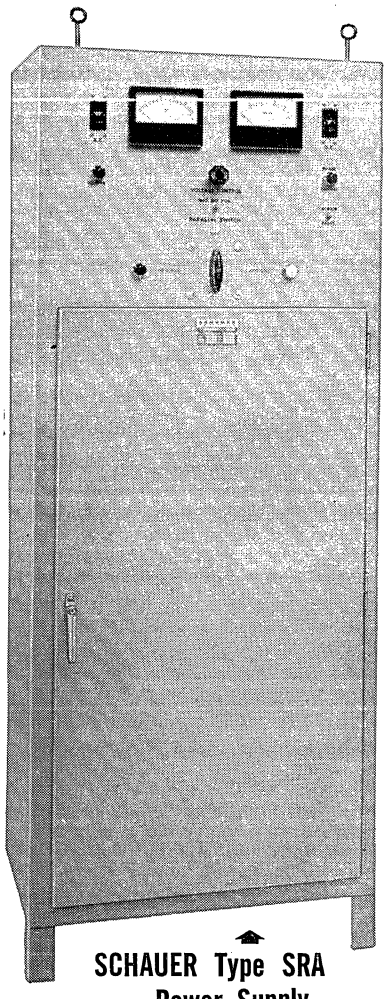
SCHAUER POWER SUPPLIES

New in design and applied engineering technology are Schauer standard and custom-engineered power supplies for communication, industrial and laboratory use. Among a wide range of types are fully transistorized series regulated and magnetic amplifier regulated, output regulated and non-regulated units. Illustrated here are but a few of the types and designs that are available.

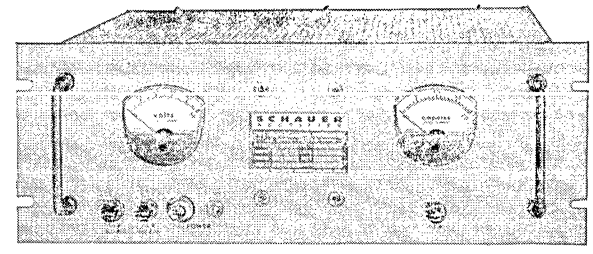
Special features that can be incorporated include alarm circuits, current limiting circuit, bus switching, etc. All units are built of quality components, conservatively rated and completely wired for maximum reliability under continuous duty conditions.

Your power supply problems can be readily solved by consulting with Schauer — manufacturers of quality products since 1907. Ask your distributor for Schauer Catalog No. 640.



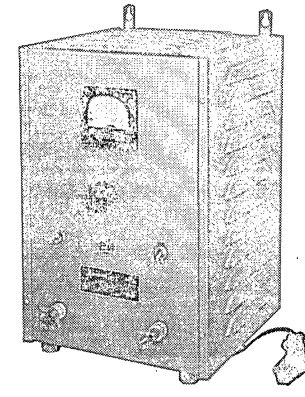
SCHAUER Type SRA Power Supply

Magnetic amplifier regulated input and output with alarm circuit and provisions for switching to either positive or negative bus of a 3-wire D.C. system. Regulation is maintained within 1% total band for load variations from no load to 125% of full load and for input voltage variations of ± 10%. Available in capacities from 10 through 250 amperes in 48, 60 and 125 volt models for 3 phase, 60 cycle input lines at standard commercial voltages.



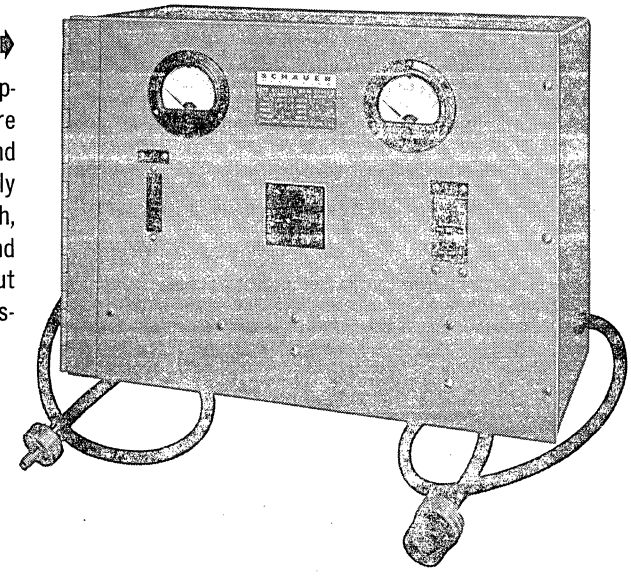
SCHAUER Type TRPS Power Supply

Transistorized regulated power supply for relay rack mounting, providing exceptionally close output regulation. Can be supplied in capacities up to 25 amperes maximum at voltage ratings up to 125 volts D.C. and in a variety of packaging and mounting arrangements.



SCHAUER Type SA48006 Power Supply

For operating and testing AM and FM 2-way and marine radios. Provides maximum 48 amperes at 6 volts D.C. or 24 amperes at 12 volts D.C. by switching. Output adjustable by multiple tap switch. The ventilated steel case for bench or wall mounting is 10″ wide x 9½″ deep x 15″ high.



SCHAUER Type SK Power Supply

General purpose power supplies for applications where close output regulation and a highly filtered D.C. supply are not required. Bench, wall and floor mountings and many variations in output and characteristics are possible.

HIGH-VOLTAGE ELECTRONICS CORPORATION

OUR THIRD DECADE OF LEADERSHIP IN HIGH-VOLTAGE TECHNOLOGY.

SOLA® CVDC power supplies, available off-the-shelf.

Sola offers a wide range of CVDC type power supplies which are available from stock of your local electronic parts distributor or the factory. These standard designs are available in any quantity and are the result of Sola custom engineering efforts.

Inherently highly reliable, the CVDC supplies are ruggedly built and use simple circuitry. Fast and dependable regulation, current limiting, and high efficiency are provided by the heart of the supply: the famous Sola Constant Voltage Transformer.

CHARACTERISTICS

- Fast, dependable line-voltage regulation: within ±1% for fluctuations of ±15%; voltage will return to regulation envelope in approximately 50 milliseconds.
- Load regulation: from 1/2% to 8%, one half to full load.
- Automatic current limiting: short circuit protection; withstands load faults; high overloads cannot damage power supply or equipment components.
- High efficiency: upwards of 75%; low input-power requirements.
- Simplified operation: no adjustments or maintenance; continuous duty.
- Convection cooling.
- Ripple: 1% rms maximum.
- Ambient operating temperature: 50° C maximum.

Constant-voltage Sola transformer provides ±1% regulation for line voltage variations as great as ±15%, serves as the heart of CVDC power supplies for voltage-sensitive equipment.

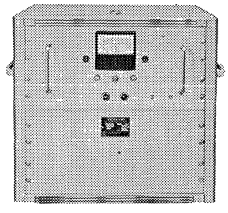
STABILINE® automatic VOLTAGE REGULATORS

- **THE MOST EXTENSIVE LINE OF AUTOMATIC VOLTAGE REGULATORS**
- **RATED OUTPUTS FROM 0.25 TO 275 KVA**

Deliver a constant output voltage regardless of variations in input voltage or changes in load current. Conservatively rated, ruggedly built, precision products. Submit specifications for ratings desired but not given in the charts. Input voltage ranges shown are at nominal output voltage; input voltage range shifts with output voltage setting. All are cabinet types; those with other construction also are indicated.

EMT series

Electro Mechanical Transistorized types in ratings from 2.3 to 118 kva. Control circuit is completely transistorized. POWERKOTE Coils in power section permit higher output ratings. Rated accuracy ±0.75% for all variations of line voltage or load current within stated range of unit.



TYPE EMT4115B

EMS series

Electro Mechanical Transistorized types for single or three phase duty with ratings from 25 to 275 kva. Several types available with individual line control for greater application flexibility. Plug-in transistorized control circuit permits quick replacement in event of malfunction.

THERMOSTATIC **AMPERITE** DELAY RELAYS

MINIATURE

AMPERITE THERMOSTATIC DELAY RELAYS

Amperite Thermostatic Delay Relays are manufactured on automatic high production equipment — resulting in a low price — and top quality. Quality is not sacrificed at any point. For example, although contacts are rated at 3 amps, 10 amp contacts are actually used. Similarly with all other parts—only the best available are used.

Amperite Thermostatic Delay Relays are actuated by a heater . . . and therefore can be used on A.C., D.C., or pulsating current. Being hermetically sealed, Amperite Relays are not affected by altitude, moisture, or other atmospheric conditions. REPLACED AS EASILY AS A RADIO TUBE.

CIRCUITS SPST: Available only — normally open or normally closed.

HEATER VOLTAGES AVAILABLE: 2.5, 5.0, 6.3, 12.6, 26, 50, 115V.
For 220V use a 6500 ohm-5 watt resistor in series, with 115V heater.

HEATER WATTAGE: Standard and Miniature Relays—all voltages—2w prox. All heaters may be operated continuously. Heaters will not be damaged by a 50% voltage overload for duration of 1 hour or less.

Amperite Delay Relays are approved for all voltages up to and including 115V under the component regulations of Underwriters' Laboratories, Inc.

VARIATION OF DELAY WITH HEATER VOLTAGE

FIG. 1—Effect of change in heater voltage on delay in seconds. Only low voltage heaters (2.5 to 26 V.) incorporate heater voltage regulations as shown in diagram.

For 22 to 30 V. supply: We recommend Amperite Delay Relays with 26 V. heaters for airplanes and similar power supplies. These heaters are regulated for battery variation of 22 to 30 V. as shown in this diagram.

CONTACT RATING

	Delay	Contact Rating Non-Inductive	DC Voltage Breakdown Contact-to-Contact	Heater-to-Contact
STANDARD	2 to 10 Sec.	115V - 3a AC	250V	500V
RELAYS	15 to 180 Sec.	115V - 3a AC	800V	800V
		220V - 1a AC	800V	800V
MINIATURE	2 to 10 Sec.	115V - 2a AC	250V	500V
RELAYS	15 to 180 Sec.	115V - 2a AC	800V	800V
		220V - 1a AC	800V	800V
FLASHERS		- ½a AC		

AMBIENT TEMPERATURES: Relays are compensated for temperatures of −55° to +80°C. (Relays can be operated from −80°C to +125°C without damage). Ambient temperature tolerances depend on type. Low voltage heaters 26V or less have better ambient compensation than relays with 115V heaters.

If the relays are actually to be used over ambients of −55°C to +80°C it is advisable to have each relay tested at the factory over the ambient. A nominal charge is made for this service.

CONTACT DROP: — 0.1V — Prox. at 1A.

DELAYS AVAILABLE:—From 2 to 180 seconds. Relays can be used in series to obtain longer delays. The delay of any individual relay up to 120 seconds can be increased up to 25% by using a resistor in series with the heater. Delays above 120 seconds cannot be increased. Relays with short delays such as 2 to 5 seconds can be increased 50%.

LIFE of any individual relay will depend on the service the contacts are subjected to. With a 115V — 2A A.C. non inductive load the contacts will withstand at least 250,000 operations. SHELF LIFE of Amperite Delay Relays is over 10 years.

INDUCTIVE A.C. LOADS: When breaking an inductive A.C. load, use a condenser of .01 to .1 mfd across contacts. In some cases, putting a 20,000 ohm, 5w. resistor across the contacts reduces the arcing considerably.

Relay Contacts should not be used on voltages above 220V.

FOR INSTANTANEOUS RECYCLE AND ELIMINATION OF CHATTER

For instantaneous recycle and elimination of chatter. Cannot be used with Sensitive Relays.

Magnetic Relay requires extra N.O. contact as shown at "E".

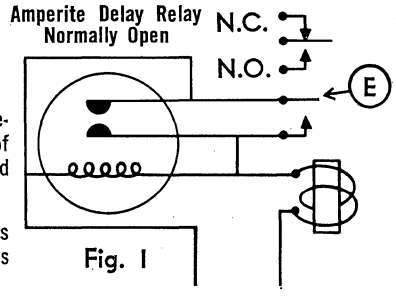

Fig. 1

For instantaneous recycle and elimination of chatter when Sensitive Relay is used.

Magnetic Relay requires an extra SPDT contact as shown at "F".

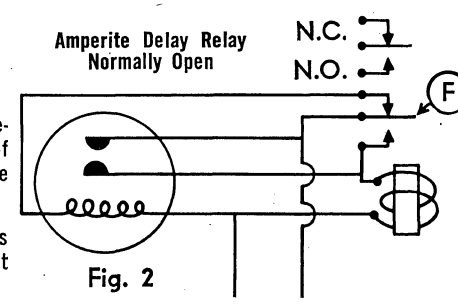

Fig. 2

INSTANTANEOUS RECYCLE: This can be obtained by using a normally open Amperite Delay Relay in conjunction with a Magnetic Relay as shown above. If normally closed is required — use a **normally open** Amperite Delay Relay — and use the NC contacts on the magnetic relay. Choose the Amperite Delay Relay for the voltage required and the delay required (e.g. — 115N030 — would be used on 115 volt supply — for a 30 second delay).

LONG CYCLE RELAYS: are also available. For example, Amperite Delay Relay 115N07T has a delay in closing of 3 to 7 seconds. After heater is disconnected, contacts will remain closed for 30 seconds minimum. Write us about your requirements.

Flashers operate approximately ⅓ on, ⅔ off. The percentage time on can be increased by reducing voltage of heater.

115V Flashers ONLY made in quantities of 12 or less. Cannot be supplied in production quantities.

Normally closed flashers are standard, and are indicated by the letter "F." The number following letter "F" denotes flashes per minute. *For example a 6F30 flasher,* has 6.3V heater, normally closed 30 FPM with a ± 15 flashes per minute tolerance. A 6F30T, would be the same type but in 9-pin miniature. Flashers are available from *30 to 90 Flashes per minute* with tolerances as shown in the chart below:

260/260B SERIES DPDT TYPES

Remote-operation switches for low-level to 1-kW operation. The 260B Series is a standard DPDT switch with six connectors; 260B Series similar but has internal connection between its NC contacts, leaving only four connectors; 260B is widely used for inserting a circuit element between two normally connected elements (e. g., inserting power amplifier between exciter and antenna). RF power rating, 1 kW to 100 MHz; 750 W at 400 MHz. VSWR, 1.05:1 0–50 MHz; 1.06:1 100 MHz; 1.12:1 at 400 MHz. Impedance, 50 ohms. Aux contacts rated 5 A, 115 VAC. Operating time 25 msec approx. Life, 1,000,000 cycles. With UHF connectors (others available). Body size, 3.00″ x 1.75″ x 0.88″. Weight, 12 oz. approx. **Specify Coil Voltage:** 6, 12, 26, 84 or 100 VDC; or 115, 220, 6 or 24 VAC. **See Coil Voltage Table.**

MINIATURE INDUSTRIAL RELAYS

"VersaPac" 67 Designed for industrial applications requiring 1 to 8 form C where space, weight, and cost are important. Single and bifurcated contacts rated at 3 and 5 amps are available. The use of armco magnetic ingot iron and a one piece frame and core provide for unusually precise adjustments. Mechanical life expectancy is in excess of 100 million operations. A plastic cover protects the relay, and sockets are available.

SHORT FRAME

TYPE 4C Relays constructed on the same general design of compact assembly and possess similar specifications. The heelpiece, armature and coil core are made of annealed magnetic iron, with the heelpiece acting as a return path for the magnetic circuit. The armature is pivoted on long-life bearings to insure constant pickup and drop-out adjustment. Standard relays are supplied with solder terminals for contact springs and coils.

Standard Contacts: 18 ga. palladium, rated 3 amps, 150W. resistive. (Gold Flashed)

LATCHING

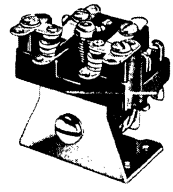
TYPE LE The LE Series relays are employed in industrial and power control applications where it is desirable to eliminate continuous use of current consumption by the duty coil.

The latching mechanism in these relays is positive, and assures consistent performance. The units are assembled on a heavy bakelite base.

Dimensions: H. 2⅜", W. 2½", L. 3⅜".

Mounting Data: 2 holes .152 dia.; clearance for 6-32 NC-2 screws; 2" centers.

Type	Coil Resistance	Contacts*	Resale
LE/2C/115VA	160 ohms	DPDT 15 amps	13.80
LE/2C/24VD	100 ohms	DPDT 15 amps	13.40



TYPE PG A continuous duty general purpose relay, available in AC or DC with DPDT (2C) and SPDT-DB (1Z) contact arrangements. Excellent for general industrial power control circuits and withstand vibration and shock because of special armature and frame design. 30 amp contact rating is achieved on the PG/1Z by including a jumper between blades, effecting a single pole design.

Dimensions: H. 1⅞", W. 1⅝", L. 1½".

Mounting Data: 4 tapped holes 6-32 NC-2; ½" x 1-5/16" centers.

Weight: 4.4 oz.

TYPE PV Very heavy-duty power-transfer relays—excellent for motor starting, lighting circuits and numerous applications where heavy double make contacts are needed. "T" blade is equipped with two ⅜" silver-cadmium oxide contacts, with ample contact gap. These contacts minimize pitting and burning under heavy non-inductive or inductive loads.

Dimensions: H. 1⅝", W. 2¼", L. 3¼".

Mounting Data: 2 holes .169 dia. clearance for 8-32 NC-2 screws, 1⅞" centers.

Weight: 6.8 oz.

TYPE 33B Designed and constructed with a variety of features which contribute to the sensitivity and longevity of this relay. Contacts and terminals are mounted on molded phenolic blocks with integral barriers. Moveable contact blades are made of spring temper phosphor bronze for high conductivity and long life. Adjusting screws on each blade permit close adjustment in the factory for contact gap, over-travel, and pressure. Armature pivots on machined phosphor bronze bearing pins and pivot holes are precision reamed. Adjustment of the armature and yoke assembly allows proper alignment between the armature and pole face. Four 6-32 N. C. tapped mounting holes in the base allow easy mounting on chassis or bracket.

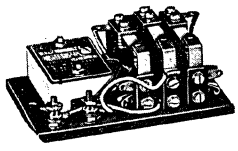
TIME DELAY • SENSITIVE • HIGH VOLTAGE RELAYS



TYPES DB & DM With their adjustable time-delay range, these relays excellent for use in preheating tube-filaments; for specialized lighting circuits, photographic controls, protection applications, etc. DB provides time-delay before break. DM provides delay before make. Both series utilize bi-metal thermal units which can be adjusted for delays from 5 to 60 seconds. Cooling of the thermal units for proper re-cycling requires 8 to 10 times the delay period.
Dimensions: H. 1⅝", W. 2⅝", L. 3¾".

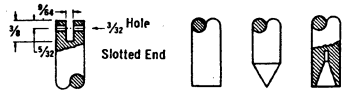
STANDARD PLUNGER STYLES AVAILABLE



TYPES 38, 39, 40, 41, 42, 51 Solid frame solenoids using high-grade steel in all parts of the magnetic circuit. Carefully controlled annealing, after all machining operations are completed, assures maximum efficiency. The frame is dovetailed and staked to the end plate, adding mechanical strength and increasing the performance of the magnetic circuit. Plungers and plunger stops, which are made of annealed and specially processed steel, are available in three standard types for specific operating requirements. Type 51 is a laminated frame solenoid and has been designed and engineered to meet all of the requirements of the highest quality A. C. solenoid. Special production techniques and rigid quality control combine to provide a highly efficient unit. The frame is composed of silicon steel laminations securely riveted to a steel frame. Pole faces are precision ground and equipped with copper shading rings. Silicon steel laminations are also used for the plunger.

T-BAR Connectors save time and reduce installation costs using individual snap-in crimp terminals crimped to pre-stripped wire and then snapped into a contact block, which forms the connector. The connector is pushed onto the wafer terminals, eliminating soldering. Because we offer a connector, rather than a receptacle, harness work can be completed outside the chassis and therefore no fancy chassis work is required to accept a receptacle. It not only makes the metal work simpler, but it also saves layout engineering and drafting time. Since T-Bar Switch/Relays are so easily mounted, they are often found on the back of meter panels or on their own brackets.

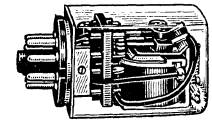
ENCLOSED PLUG-IN AC RELAY — 1210-N



With Built-In Neon Lamp to Indicate Circuit Faults—10 AMPERE

This plug-in relay utilizes a miniature neon lamp connected across coil terminals. The lamp lights each time the coil is energized, or indicates a circuit fault when lamp is "dark." Ideal for detecting circuit faults in relay banks, mass relay arrangements, or where relays are visibly located at intermediate switching points of the circuitry. Precludes the use of circuit testers. Available with 8 pin octal plug for DPDT and 11 pin for 3PDT. Contacts rated 10 amps at 115V., AC, 60 cycles, non-inductive load. Shpg. wt., 3.5 oz.

GUARDIAN AC SOLENOIDS and SOLENOID SWITCHES

Solenoids available in both intermitttent and continuous duty types. Intermittent types should not be energized for more than 5 consecutive minutes, or be permitted to rise more than 85°C. above 24°C. ambient, without giving sufficient time to cool between operation cycles. Continuous duty types are designed so they will not rise more than 85°C. above the 24°C. ambient temperature when operated at rated load. Plunger has slotted end with ⅛" diameter hole for coupling.

When Ordering give the following information: (1) Solenoid Number; (2) Operating voltages and AC or DC current; (3) Continuous or intermittent duty (if intermittent, give the cycle of operation, length of time current will be passed through the coil, and any other pertinent information); (4) Maximum stroke and maximum pull required.

Pull Data listed in this bulletin obtained during "cold" operation.

"S" indicates single pole double throw switch, rated at 10 amps 115 vac.

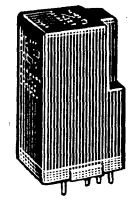
GUARDIAN TIME DELAY RELAYS



SERIES TD — This is the most accurate and compact solid-state time-delay available commercially from stock. 3DPT contacts handle up to 10 amp resistive load. Six standard model relays for 24V., DC and 115V., AC 50/60 cycles provide delays from 1 to 180 seconds. All units utilize silicon semi-conductors and precision tantalum capacitors for reliability. 15-turn screw-type potentiometer furnishes high resolution and accuracy. Accurate to 5% of a nominal setting over its complete temperature and voltage range. Repeatability is 2% after a line interruption of 50 milliseconds. STEPPING CONTROLS—For accurate sequence selecting, pulse multiplying, pulse dividing, circuit selecting, automatic homing, remote homing, counting and latching. Guardian steppers are specified for automatic control of electrically operated business machines, accumulators (coin and other), animated displays, electrical scoreboards, automatic overhead garage doors, assembly line controls, automatic packaging (loading) controls, sump pump controls, commercial slide projectors, among others. All Guardian steppers are **intermittent duty** direct-drive units with switching operations completed upon energization.

CONTINUOUS ROTATION

The circuit selection wiper on Continuous Rotation Steppers moves in one direction only, upon energization of the step coil. This type of stepper is available in standard 24 point (MC) or 40 point (PC). The Guardian MC Midget Continuous Rotation Stepper is particularly adaptable to repetitive sequence functions. The 24 bridging contact deck is evenly divisible by eight possible sequences. The PC stepper features self-stepping speeds up to 30 steps per second and mechanical life expectancy of over 4,000,000 steps.

All stepper contact points are rated 1½ amps resistive, at 115 V., 60 cps. Coil* Voltages are 120 AC, 60 Hz and 24 DC

ELECTRICAL RESET

The circuit selecting wiper on Electrical Reset Steppers can be reset to zero or home from any desired position, by energization of the reset magnet. They are frequently employed to record counts by various numerical groups, then resetting automatically.

Type M.E.R. A direct drive (steps on energization) with positive mechanical reset interlock actuated by the reset magnet and unlocked on the first energization of the step magnet. Assures positive reset on as short a pulse as one-hundreth of a second. By interconnecting two or more Steppers, count can be increased to any desired total counting by tens, or any convenient multiple. Will control a sequence of operation and then automatically reset to starting position.

Type P.E.R. Operation same as M.E.R. but with up to 36 active contacts.

ADD AND SUBTRACT

Add and subtract steppers are basically continuous rotation types with the added feature of being able to reserve the movement of the selecting wiper when required.

Type IR-MAS A midget add and subtract stepper incorporating a cam actuated switch which operates at zero position. Used primarily to indicate a zero balance between pulses supplied to the "add" coil as compared to pulses received by the "subtract" coil.

GENERAL PURPOSE RELAYS

MINIATURE PLUG-IN *LOW PROFILE LOW COST*

(SERIES MKTR)

Despite its compact size this new totally enclosed, low cost, low profile miniature relay has not compromised the high quality of its progenitor the Series MK open relay. The low mounting profile (dust cover included) has been made possible by incorporating the frame of the relay with the connector-header. Thus a certain basic hardware has been eliminated resulting in important size reduction. Versatility is also assured since the standard terminals can be used with Amp snap-on connectors, printed circuits, or plug-in receptacles. Also available with studs for chassis mounting. Termination can be used for soldered connections. The plug-in-receptacle is true 10 ampere construction. Lugs can be used for either solder or snap-on connections.

Type SK
Type SKA
Type SKD
Type SKT

This entire series of SK type relays is identical in construction to our MK series miniature relays, with one essential difference —the special alloy used in pole and frame increases the magnetic flux many times thus making the relays very sensitive to very low power levels—only 60 milliwatts per pole.

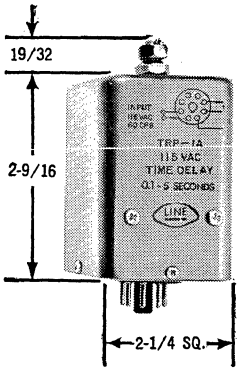
TIME DELAY RELAYS



PLUG-IN TYPE (SERIES TRP)

The series TRP Time Delay Relay provides a pre-set delay between the closing of one set of contacts and the subsequent operation of a set of SPDT load contacts.

The series TRP initiates from a sustained switch closure to L1 and L2. The unit resets instantaneously when this circuit is opened; ready for another timing operation.

The series TRP is available in two operational options:

Type "A"—If sustained closure is interrupted during time cycle, unit will not reset. When closure is again made, timing will continue to give originally selected time delay.

Type "B"—If sustained closure is interrupted during time cycle, unit will instantaneously reset.

REED RELAYS — 3 STANDARD TYPES

In computer, data processing and guidance system development, design engineers are enthusiastically applying dry reed relays in place of switching diodes. The reasons: miniature profile—life expectancy exceeding 100,000,000 operations—less heat generated compared with switching diodes—3 millisecond operating time and very high resistance in the open contact stage.

To efficiently serve the growing demand for dry reed relays in these and other applications, Line Electric now stocks these 3 standard types for immediate delivery in prototype quantities.

Micro-Miniature Rotary Relays

MAGNECRAFT Class 44 Rotary Relays have been developed to provide increased reliability in the crystal can size. Here are a few of many areas in which improvement has been made:

1. Frame and header assembly of rugged bridge-type construction—assures greatly increased resistance to distortion from shock, vibration and temperature—to military specifications.
2. Balanced armature—minimizes the effect of gravity, shock and vibration on operating reliability.
3. Hinge design—oversize, instrument type bearings at BOTH ends.
   a. Minimizes friction for increased sensitivity and greater contact pressure.
   b. Increases operating reliability and life.
4. The finest development in high temperature insulation.
5. Hermetically sealed in inert gas for maximum protection against severe ambient conditions.

Contact combination: Double Pole, Double Throw
Contact rating: 2 amperes at 28 VDC or 115 VAC, non-inductive.
Operate Time: 5 milliseconds maximum with nominal voltage.
Release Time: 5 milliseconds maximum.

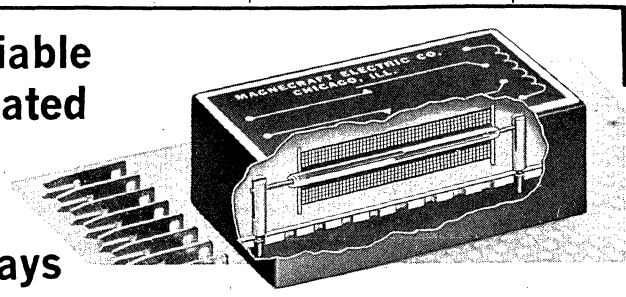
Ultra-Reliable Encapsulated Printed Circuit Reed Relays



The package illustrated is a Class 102PC, DPST-NO Standard Size Relay (page 7) cut away to show typical assembly of one reed.

Construction of miniature encapsulated printed circuit reed relays (pages 5 and 6) is similar to the standard size.

1. Reed contact leads are soldered stress-free to rugged terminal posts.
2. Terminal posts extend through the terminal board as printed circuit pins.
3. The complete assembly is encapsulated, which provides:
   a. Mechanical protection for the glass capsule, contact leads and coil.
   b. Full protection against tampering and contaminating atmosphere.
   c. Rigid positioning of terminal supports and printed circuit pins; stresses on circuit pins cannot transmit to the reed contact leads and affect relay adjustment.

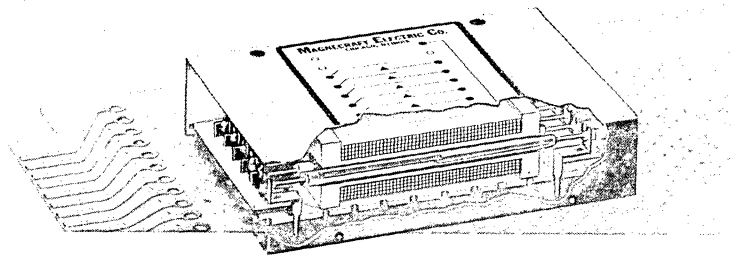
MPC—The Low Profile Printed Circuit Reed Relay Package that combines High Reliability and Low Cost



1. Reed Relay contacts are hermetically sealed with inert gas in glass capsule; completely protected from contamination and tampering.
2. Contact leads are soldered (or welded) stress-free to rigidly positioned terminal supports.
3. The combination circuit board pins and terminal supports are securely fastened to terminal board; stresses on circuit board pins cannot transmit to contact leads and affect relay adjustment.
4. Integrally molded Nylon bobbin and mounting base combine electrical insulation and mechanical protection for the glass capsule.
5. Snap-on steel cover adds mechanical protection and magnetic shielding.

The package illustrated is a Class 102MPC 6PST-NO Standard Size Relay (page 7) cut away to show typical assembly of one reed.

Construction of miniature MPC packages (pages 5 and 6) and sub-miniature MPC packages (page 9) is similar in principle to the standard size MPC package illustrated.

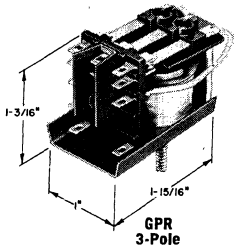
OHMITE general purpose relays

MODEL GPR — INDICATOR, PLATE, THYRATRON AND LATCHING VERSIONS IN UNENCLOSED AND ENCLOSED TYPES

Simple, rugged, low cost relays handling substantial power for small size. Uncomplicated design provides unusual flexibility for making and changing connections and mounting. Stock includes relays in versatile enclosures, some with indicator light, also plate, thyratron and latching versions. Wide commercial and industrial use where economy and versatility are important.



GPR
4-Pole

UNENCLOSED RELAYS

Basic (Unenclosed) Relay: All connections terminate on barrier-type terminal panel on combination solder — quick-connect (push-on) lugs which accept AMP 110 female connectors. The terminal panel is conveniently incorporated into printed circuit boards. Fixed contacts are integral inlay on terminal itself. Normally furnished with a 6-32 x ½" mounting stud and non-turn boss (or lug for 4-pole relays). A 6-32 threaded hole is optional. Unenclosed relays can also be mounted by plugging their panels into Ohmite SOGPR sockets. See "Socket" following.

Contact Ratings: Two ratings — fine silver contacts, 5 amps at 115 VAC or 32 VDC resistive; silver-cadmium contacts, 10 amps.

Insulation: Tested at 1500 VAC.

Coil Wattage: 1.4 watts DC operation; 1.6 watts (2.0 volt-amps) AC except 2.4 watts (3.70 volt-amps) for 4-pole AC and AC latching relays.

ENCLOSED RELAYS

(GPRTA-, GPRTT-, GPRTS-, GPRTP-)

Four types of clear plastic enclosures as follows:

Chassis Mounting Types: "GPRTA"—("Terminals-Above-Chassis" type) has terminal panel opposite to mounting flange; "GPRTT" —("Terminals-Through-Chassis" type) has terminal panel on same end as mounting flange, requires chassis cutout; "GPRTS" type (Terminals for Socket Use) is similar to GPRTT but has no mounting flanges. It is intended strictly for plug-in mounting in Ohmite socket "SOGPR" (see "Socket" below).

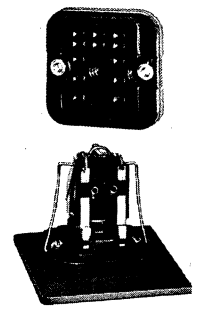
Plug Base Type: "GPRTP" — employs octal plug for 1 and 2 pole relays; 11-pin plug for 3-pole. The octal plug base is integral with relay for rigidity — is designed with recessed pins which meet UL spacing requirements (150V).

Socket (SOGPR): Unique socket fits the terminal panels of all GPR relays and provides over-the-surface spacing to meet UL requirements for 150 volts. Requires chassis cut-out to mount. Hold down springs (see illustration) for unenclosed and enclosed relays, are provided with each socket but are not required except under conditions of vibration or shock. Socket solder terminals will also accept AMP 11 quick-connectors. See socket listings.

SOCKETS FOR GPR, GPRTS RELAYS

For up to 3PDT: 1¾" square, requires 1¼" x 1½" cutout.* 2 holes (for No. 6 screws) on 1⅜" centers.
Stock No. SOGPR-9 Net 1-24 $1.10

For 4-pole models, 1¾" x 2", requires 1½" x 1½" cutout.* 2 holes (for No. 6 screws) on 1⅝" centers.
Stock No. SOGPR-12 Net 1-24 $1.25



*Std. punches and dies from Ward Machinery Co., Chicago. No. 28, Style 22N, 1¼ x 1½, for SOGPR-9: No. 28, Style 14R, 1½ x 1½, for SOGPR-12.

Indicator Relay: Incorporates light bulb to indicate energized condition of coil. Stocked only in GPRTP enclosures described in preceding. Neon bulb furnished with coil ratings 70 volts and above; incandescent bulbs for coil ratings below 70 volts.

UL & CSA Approval: Column heads in the stock tables carry the UL (Underwriters' Laboratories) or CSA symbol (Canadian Standards Association) where applicable. The grey tint in the column indicates the relays are recognized under the "UL components program." The acceptability of such relays by UL depends upon their combination with other equipment such as sockets etc.

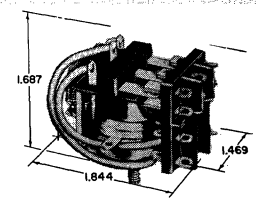
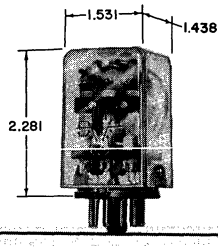
KA AND KAP SERIES Small, low cost, highly efficient general purpose relays for handling light power loads such as small motors, solenoids and other relays, and general automation work. All KA and KAP relays with "Y" suffix bear CSA* listing and carry U/L component recognition (File No. E22575). Mechanical life expectancy: 10 million operations. Duty: Continuous. Contacts: Movable, $\frac{1}{8}$" dia. gold-flashed silver; stationary, $\frac{5}{32}$" dia. wide silver overlay.

The KA is the open version of this series. Mounting: One No. 6-32 threaded stud and locating tab on $\frac{7}{16}$" centers. Weight: 2 oz. The KAP is the enclosed model and is protected by a clear, high impact plastic dust cover. Terminals: 8 or 11-pin plug. Weight: 3 ozs.

"G" suffix indicates silver-cadmium-oxide contacts on movables rated 10 amps.



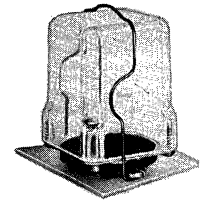


HOLD DOWN SPRINGS
Designed to insure secure mounting of relays in any position. Will accommodate machine screws or rivets.

For KAP relays: (shown above)
9KA1 50 per box NET $5.80

For KCP and KRP relays (pages 6 and 3)
9KR15 50 per box NET $5.80

For KUP plain case relays (page 3)
9KU3 50 per box NET $5.25



KHU/KHP/KHS SERIES Small, rugged, 4PDT, available for AC or DC operation. Only KHU relays carry Underwriters' Laboratories component recognition. KHU has Lexan and KHP has nylon dust cover; KHS is hermetically sealed in metal enclosure. These relays are designed to meet the exacting requirements of data processing, computer and process control applications. Contacts are $\frac{3}{32}$" gold-flashed silver and are rated 3 amps @ 30V DC or 120V AC resistive for 100,000 operations. "12" suffix indicates silver-cadmium-oxide contacts. Mounting: Solder terminals with a No. 3-48 $\frac{1}{16}$" long. Adaptable to sockets (below) with printed circuit or solder lug terminals. Weights without sockets; KHU or KHP 1$\frac{1}{8}$ ozs.; KHS 1$\frac{9}{16}$ ozs.

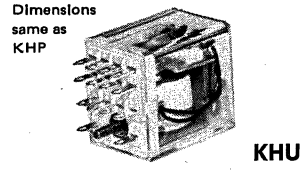
KHU/KHP hold down spring (similar to KCP-KRP, above.)

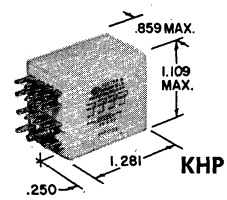
9KH3 50 per box, weight 3 ozs. Net $5.80

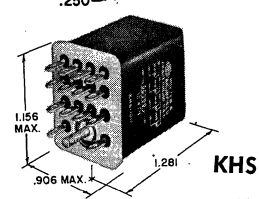
9KH1 Solder terminal sockets and retainers. Box of 10 Net $6.95

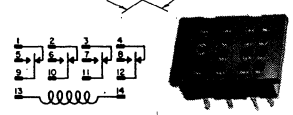
9KH2 Printed circuit terminal sockets, Box of 10 Net $6.95

Weight per box: 4 ozs.









KL SERIES Multiple contact relay. Varied contact combinations and high dielectric phenolic insulation affords extreme versatility and utility. Widely used in such applications as industrial controls, elevator controls, communications equipment and electronic measuring devices. Mounting: All models—Two No. 6-32 tapped holes on 1$\frac{7}{16}$" centers. Contacts: $\frac{1}{8}$" dia. gold-flashed silver. Weight: 5 ozs.

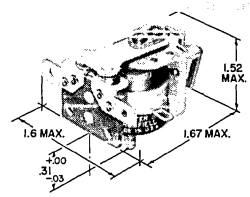
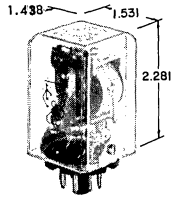
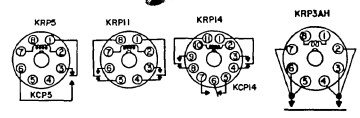
KR3-H SERIES Ruggedly constructed but of small size, KR3-H is a heavy duty relay especially designed for applications where limited space is a factor. Its heavy duty copper alloy movable contact carrier has twin ¼" dia. silver-cadmium-oxide contacts rated 20 amps @ 120V AC 60 Hz resistive, or 28V DC; 1 HP 120/240V 60 Hz. Contact arrangement is 1 Form X (SPST-NO-DB) only. Terminals: suitable for ¼" quick connect, also solder; for contacts: solder only for coil. Size: 1.6" x 1.671" x 1.52". Seated height: 1.21". Mounting: One 6-32 stud and locating tab on .437" center. Weight: 2 ozs.



KRP3-H SERIES All electrical specifications listed above for the KR3-H series relays apply to the KRP3-H. However, the KRP3-H is enclosed in a clear, high impact plastic dust cover and features an octal plug-in base. Weight: Approximately 3 ozs.

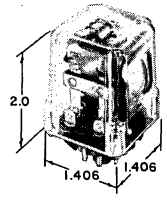


KRP SERIES Versatile, multi-contact arrangement. Enclosed in a clear high impact plastic dust cover. Standard 8-pin octal-type plug for KRP5 and KRP11, 11-pin for KRP-14. Weight: Approx. 3 ozs. Contacts: 5 amp, 1/16" dia. gold-flashed silver, 10 amp 1/16" dia. silver cadmium-oxide. See KCP-KRP hold down spring for special mounting applications. See KRP-N indicator lamp relay for current monitoring applications.



KRP-N INDICATOR LAMP RELAY A general purpose relay incorporating a lamp to indicate current or voltage availability in power circuit. Contacts: 1/16" dia. silver cadmium-oxide. Enclosure: Clear, high impact plastic dust cover. Mounting: Standard octal plug. Weight: Approx. 3 ozs.

Hold down spring (Please see page 2).



"P" — CASE A clear high impact plastic case for mounting rectifiers, capacitors, resistors or a combination of these. Available with octal-type plug with 8 or 11-pins. Comes complete with four screws. Weight: .5 ozs. each. See KCP-KRP Hold Down Spring for special mounting applications.

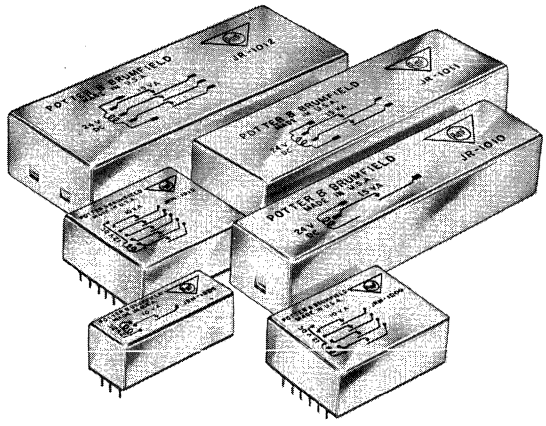
DRY REED RELAYS
TYPE JR STANDARD
TYPE JRM MINIATURE



Fast response, reliable performance, high sensitivity, and long life make JR standard and JRM miniature series relays especially suited for data processing applications, computer equipment, logic circuitry and various other sophisticated control circuits.

TWO TYPES OF BASIC CAPSULES

Both JR and JRM relays employ dry reed glass capsules with two basic types of contact arrangements, Form A (SPST-NO) or Form C (SPDT). Biasing with a permanent magnet changes Form A to a Form B (SPST-NC). This arrangement

requires that coil polarity be observed. It uses a two-cavity bobbin. Combining one Form A with one Form B results in a single Form C (SPDT) break-before-make; this uses a three-cavity bobbin. A "true" Form C (SPDT) uses a reed switch with two stationary and one movable contact. The movable contact is normally closed until the coil is energized, causing a "true" Form C (SPDT) break-before-make; it uses a single-cavity bobbin.

JM SERIES
MERCURY-WETTED CONTACT RELAYS

Rare long life, high speed, and unvarying dependability — all are the result of the basic component of these relays: a hermetically sealed glass capsule. It contains the contact arrangement and a small reservoir of mercury sealed in a high pressure hydrogen atmosphere. A film of mercury is renewed for every operation—that's why you can think in terms of billions of operations without contact bounce, pits or welds.

TWO TYPES OF CAPSULES

The capsule used in JMF and JMF2 (with 2 capsules) modules and JML relays has a SPDT, break-before-make (Form C), non-bridging contact arrangement. Each capsule used in JMP, and JM1 to JM4 relays has a SPDT, make-before-break (Form D), bridging contact arrangement. JMF, JMF2, JML and JMP series achieve a high rate of sensitivity by factory-adjusted magnet biasing.

Mounting Position: Upright mounting required, but deviation from upright up to 30° causes only minor deviation in operating characteristics.

CONTACT RATINGS

JMF, JMF2 and JML: 500V max., and 2 amps max., 100VA max.*
JMP and JM1 to JM4: 500V max., and 5 amps max., 250 VA max.

*With contact protection unless in a low level circuit. Details of a simple protection circuit consisting of resistor and capacitor in series are packed with each relay.

TIME DELAY RELAYS

AS LOW AS $12.50

● ON DELAY ● OFF DELAY ● KNOB ADJUSTABLE ● RESISTOR ADJUSTABLE ● FIXED TIME DELAY

A wide selection of solid state time delay controls are represented by Potter & Brumfield. The differences are in their degree of accuracy, the variety available in each series, and their cost.

BASIC TIMING CIRCUIT

The basic timing circuit of all three series consists of a resistor in series with a capacitor. When the input voltage is applied to the resistor-capacitor circuit, the voltage across the capacitor slowly increases. When the firing level is reached a solid state trigger circuit acts to turn on a solid state output switch that energizes a switching relay or external electrical load.

CD SERIES

Remarkably dependable, accurate and flexible, the CD series offers an unusually wide selection of operational configurations, all with accurate time delay values, fast reset time and excellent repeatability. It is available in two types: Knob-adjustable in two versions, one with the relay in the same enclosure as the solid state unit, the other with an auxiliary relay. A second type is adjustable with an external resistor. The CD series is available for time delay on operate or on release.

CH SERIES

The CH series is intended for a wide range of industrial applications where economy is of greater interest than highly critical performance. It is available in two types: Knob-adjustable with the relay in the same enclosure as the solid state unit. The second type has a fixed time delay period that is set at the factory and cannot be modified; its case has no knob. The CH series is available for time delay on operate and on release.

CU SERIES

An outstanding value in a solid state time delay relay at low cost, the CU series is designed for delay on operate applications in machine tool controls, copiers, office equipment, coin-operated machines, process controls and many others. It is available in two types: Fixed time delay that is set at the factory and cannot be modified. Second, adjustable with an external resistor. For minimum time two terminals, 2 and 5, must be shorted; for maximum time the listed external resistor between terminals 2 and 5 must be added. For intermediate times select a lesser value resistor, or a potentiometer. Either model can be furnished in two types of enclosures with the relay in the same enclosure as the solid state unit. The CU series is offered with delay on operate only.

CJ SERIES

CJ Series time delay dry reed relays combine the basic timing characteristics of time delay relays with the long life and performance of miniature dry reed relays. Two series are available, the CJC fixed time delay on operate and the CJH external resistor adjustable time delay on operate.

SOCKETS FOR CU-41 PLAIN CASE RELAYS

All CU series time delays have an internal DPDT 10 amp relay of the KUP series featured on page 3. The cases for the CU and KUP are dimensionally the same. The plain cases fit the same sockets, and the same hold down spring (9KU3) can be used. Please use the KUP type designations (9KU1, 9KU2 and 9KU4) and prices (page 3) for these accessories when ordering.

For Bi-Stable or Center-Stable Operation

Small size, ultra-sensitivity and high speed switching together with efficient, bounce-free contact action characterize MDP polarized relays. Their operation depends on both the magnitude and direction of the coil current. Two types of contact arrangements provide the following action when the coils are de-energized: *Bi-stable* — armature remains in its last energized position; *Center-stable* — armature remains in center-off position with contacts open. Contact materials as listed. Temperatures: —60°C to +85°C. Measuring only 1 1/16" sq. by 1 13/16" high (seated), MDP relays are equipped with a plastic dust cover and 8 or 12-pin plugs. Weight: 4¼ ozs.

Types MDP-900-1 and MDP-930-1 (with extra long life contacts) will directly replace Western Electric Type 255 relays. 2 1/16" square x 3¾" overall height. Weight: 10 ozs.

* Magnet coils designed for continuous duty. Do not operate at rate higher than indicated under Mechanical Life.

** Based on steady state test under laboratory environmental conditions. Consult factory if application involves unusual load, speed of operation, off-on ratio, environmental or operating conditions. Electric life substantially greater when operated below rated load.

† Load tests — making inrush ratings (0.4 to 0.5 P.F.) — breaking 125% continuous rating (0.65 to 0.8 P.F.).

CONVERSION INSTRUCTIONS

All 10 and 15 ampere contact assemblies on RBM standard type C contactors are normally open. To convert to normally closed, use screwdriver. No special parts needed.

1. Remove movable contact assembly and lock washer by backing off terminal nut "A".
2. Loosen screws "B" and remove stationary contact assemblies.
3. Invert movable contact assembly, and replace on contactor with flat "I" spring resting on contact block. Contacts facing out.
4. Remove screws "B" from, and reinsert into opposite end of, stationary contact assembly. Re-install stationary contact assemblies; holding contacts in alignment with movable contacts while tightening screws.

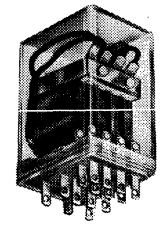
NEW MINIATURE UNIVERSAL TYPE RA

A precision piece of equipment at a commercial price —



1.515" high, 0.847" wide with dust cover

designed for use in computers, data processing equipment, communications equipment, process control applications, and other equally important systems.

Type RA is a four pole universal type relay for 4 PDT or double-make, double-break (DPDT-DB) action. 3/32" contacts rated at 3A — normally supplied in gold-flashed silver. Also available in silver cadmium oxide, gold nickel, silver palladium, etc.

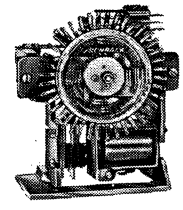
Printed Circuit Terminals at Same Prices

TYPE RR REMANENCE RELAYS

Magnetic Latching for miniaturized circuitry. Same physical characteristics as RA. Voltages from 24-220 AC and 12-110 DC. Same electrical characteristics as CRD and CRF on opposite page. Prices range from $4.50-$5.30 list.

ROTARY STEPPING SWITCH TYPE RT



The SCHRACK Rotary Stepping Switch is a combination of three reliable components:

1. Standard Relay with 1 Form C heavy-duty contact.
2. Ratchet driven Rotary Switch consisting of four banks of twelve or ten points each with sliding bifurcated wipers.
3. Ratchet driven Stepping Relay with two cams which actuate one Form C contact each.

Schrack Rotary Stepping Switches have a highly efficient magnetic circuit and a driving mechanism designed for maximum operating safety. All components are mounted on a rigid die-cast light metal frame and contacts are permanently molded in a sturdy melamine plastic.

ROTARY SWITCH terminals are arranged in a circular pattern with four groups of twelve points each. A conversion can make it operate with 3 groups of 16 each. An alternate version with 4 x 10 points is available for applications requiring decimal counting. Each group occupies a quadrant of the circle and contains a common bus which is connected to the twelve or ten insulated points in sequence by means of a sliding wiper as the switch is operated.

TYPE RT 304 — 4 x 12 Contact Points $19.00 ea.
TYPE RT 404 — 4 x 10 Contact Points $19.00 ea.

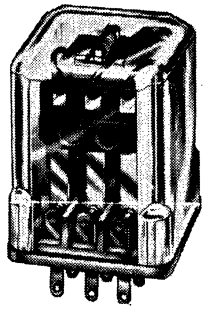
SCHRACK RELAYS

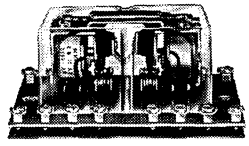
SINGLE COIL MAGNETIC LATCHING RELAYS — TYPES CRD & CRF



This is a bi-stable power relay held in operated position by a strong residual magnetism of the coil core after the coil is de-energized. The coil core is of a special alloy having sufficient remnant magnetic force to hold the armature locked-in for an indefinite period of time after being energized momentarily.

In design, these magnetic latching relays are identical, except for the base, with the Schrack Type CAD plug-in relay. Contacts are rated at 5 or 10 amps depending on materials used. DPDT (2 form C) or 3 DPDT (3 form C) versions are available.

LATCHING RELAY — TYPE CBT



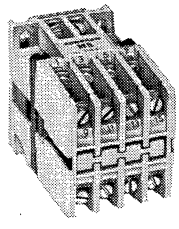
A dual coil mechanical latching relay. Each relay operates on a momentary impulse on either coil and is held in the set position until released by an impulse on the other coil. Both coils must be for the same voltage and are continuously rated.

Contact rating: 10 amps. (Based on 600 operations per hour at 115 volts AC 60 cy. resistive load).

May be operated continuously at 1000 cycles per hour.

The CBT relays have a transparent dust cover and a sturdy base plate of insulating material. Screw-type terminals are provided for all contact and coil connections. Available in voltages from 6-230 AC and 6-110 DC.

MULTI-POLE CONTACTORS TYPES M4, M6, M8, M10



Small, low-cost units

Versatile — with auxiliary contacts.

These are compact 8-pole air-break contactors. Principal applications for the M4 type are control circuits (pilot duty), but also may be used for switching of small single-phase or threephase motors. Type M8 has 4 contacts with increased rating and 4 contacts identical with M4. Types M6 and M10 have same features as M4 and M8, but have 3 main contacts and 1 auxiliary contact — intended for industrial applications.

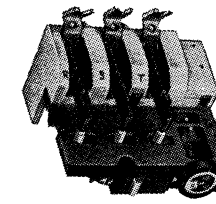
LOW COST PROTECTION AGAINST SINGLE PHASING IN A THREE WAY SYSTEM



Operates by the use of bi-metallic strips and dissimilar coefficients of expansion under temperature changes.
When temperature increases due to overload, a microswitch is activated in any leg of a three phase circuit.
Microswitch is normally placed in series with the solenoid of any switching device in the 3 phase line. Reset button may be manually or automatically operated.

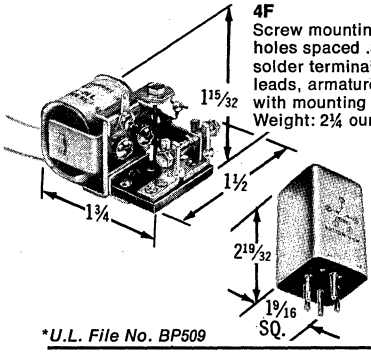
SENSITIVE – SERIES 4 DC – SPDT

A precise, versatile relay for applications requiring low power, stable trip values, and high dropout. Excellent repeatability over 100,000-operation rated life. Mechanical life eight million operations minimum. Responds to gradually changing or on-off signals. Useful where coil remains partially energized when relay is in deenergized condition, as in transistor circuits with high idle current. Ideal for vacuum-tube plate circuits, smoke detection controls and alarm systems in which the relay must trip under alarm conditions but not under supervisory conditions. Temperature range: +32 F to +122 F. UL-listed for use in burglary protection equipment.



4F
Screw mounting (2 #6-32 holes spaced .375), 3 solder terminals, 2 coil leads, armature common with mounting bracket. Weight: 2¼ ounces.

SENSITIVE – SERIES 5 DC – SPDT

Extremely sensitive, precise, and rugged — one of the most versatile relays available. Applications range from air navigation systems to burglar alarms and meter protection equipment. Unusually high contact forces at inputs as low as 1 milliwatt, gradually changing or on-off. Useful for overload-underload detection — reacts without amplification to minute variations from normal. Exceptional trip-point stability (±2%) over five-million-operation life. Withstands heavy voltage-or-current 30-to-1 coil overloads, 100 g shock. Temperature range: S: −4 F to +158 F; SS: +50 F to +140 F. All types UL-listed for use in burglary protection equipment.

RESISTORS

±1% PRECISION ®CARBOFILM RESISTORS

Precision deposited carbon resistors designed for circuits calling for the accuracy and and stability of wire-wound resistors with the marked economy of carbon resistors. The exclusive Aeroglaze conformal coating offers mechanical protection superior to any other coating eliminating the need for special tubes, sleeves and jackets. Aeroglaze coating will meet all moisture requirements of MIL-R-10509B. Carbofilm resistors offer outstanding stability, low voltage coefficient, low capacitance and inductance in high frequency applications.

CARBOFILM CHARACTERISTICS

TESTING: All Tests conducted in accordance with MIL-R-10509B requirements.

TEMPERATURE COEFFICIENT: Approximately 200 ppm per degree C in the lower resistance ranges and not exceeding 500 ppm per degree C in the highest values specified by MIL-R-10509B.

MOISTURE RESISTANCE: Will meet or surpass the requirements of MIL-R-10509B.

LOAD LIFE: When tested for more than 1,000 hours at full load operation in 40°C ambient temperature, maximum changes are less than 1% with an average change of less than 0.5%.

TEMPERATURE CYCLING: After 5 complete temperature cycles there is an average change of 0.21% with a maximum change of less than 0.5%.

SHORT TIME OVERLOAD: When subjected to 2.5 times the rated working voltage, but not exceeding 2 times the maximum rated voltage for 5 seconds, changes are less than 0.25% with an average change of 0.13%.

LOW TEMPERATURE OPERATION: Maximum changes are less than 1%.

ACCURACY: Guaranteed tolerance of plus/minus 1% at 25°C. (77°F.)

AGING: Due to manufacturing process and control, changes attributed to aging are negligible. The average change in resistance for self-aging is approximately 0.2% per year.

VOLTAGE COEFFICIENT: Does not exceed .002% per volt.

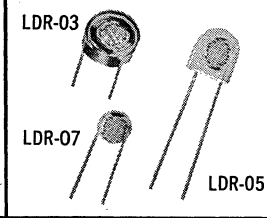
LIGHT DEPENDENT

LDRs, made from cadmium sulfide, are semiconductors whose conductivity increases when irradiated by wave lengths within a certain range of the spectrum. Made in specific versions with relevant electrical characteristics for control, counting, measuring, alarm and switching applications.

Type	Description	Diameter (")	Thickness (")
LDR-03	Makrolon case and epoxy resin	0.55 ± 0.196	0.35 ± 0.06
LDR-05	Plastic case and epoxy resin	0.43 ± 0.006	0.14 ± 0.004
LDR-07	Lacquered protective coating	0.34 ± 0.16	0.071 ± 0.002

Applications: Auto Parking & Headlight Dimmers, TV Brightness Control, Exposure Meters, Flame Control in Oil Burners, Magnetic Tape Controls, etc.

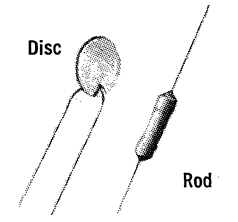


VOLTAGE DEPENDENT

Most important property is the non-linearity between their resistance and the applied voltage. Voltage dependency is due to contact resistance between the silicon carbide crystals. Crystal contacts form a network of series and parallel resistors which determine the electrical characteristics.

Available Types
Disc types available: 0.8W to 3W
Rod types available: 0.7W

Applications
VDRs can be used in spark suppression and contact-protection applications, as well as in series with a resistor for voltage stabilization. Although the stabilizing circuit with a VDR cannot compete with more elaborate circuits, it has vital advantages of simplicity and small space adaptability.

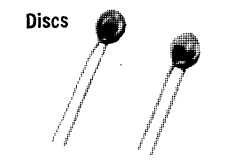


POSITIVE TEMPERATURE COEFFICIENT THERMISTORS

PTC Thermistors increase in resistance as the temperature increases. PTCs are disc shaped with connecting leads and are lacquer coated for protection against atmospheric influences.

Available Types
Standard Discs 1W 40 to 50V series
Standard Discs 0.5W 25V series

Applications
Resistance changes of 10%/°C or better permit the use of PTCs wherever any of the following factors are decisive: ambient temperature; dissipated power; inertia of PTC and positive temperature coefficient.



NEGATIVE TEMPERATURE COEFFICIENT THERMISTORS

NTC thermistors are resistors which exhibit a high negative temperature coefficient of resistivity. They are made of semiconducting oxidic materials. The resistance of the oxides decreases rapidly when the temperature rises.

Available Types
Rod Type
Disc Type
Miniature Bead Type
Special Types for Automobiles
Special Types for Radio and TV

Applications
Resistance changes of 3% to 6% per °C permit the use of NTCs in applications such as: ambient temperature measurement and control; resistance determined by dissipation and time delays.

JC PRECISION RESISTORS

THE JC PRECISION RESISTOR . . . A LOW COST PRECISION RESISTOR FOR INDUSTRIAL APPLICATIONS

Airco Speer Electronic Components has introduced the new Jeffers' *JC Resistor Series* to meet an increasing market need . . . need for *HIGH STABILITY RESISTORS* at *NEW LOWER PRICES.* The JC resistor series is well suited for precision applications, with its TC of ±15PPM/°C and *TOLERANCES* of ±0.1% to ±1%.

Precision wire-wound resistors have long been used by circuit designers who need high stability components. Today, the Jeffers JC series offers very important advantages over precision wire-wound resistors of the same tolerance category.

ADVANTAGES OF THE JC RESISTOR SERIES

Low Cost . . . across the wide resistance range of 25 ohms to 2 megohms.

Resistance Range . . . generally twice the resistance range of a precision wire-wound resistor in any given size.

Frequency Response . . . 10 MHz or better—precision wire-wound resistors are normally limited to less than 50 KHz.

Greater Wattage Capability in a Smaller Size.

Uniformity Of TC Characteristics From Resistor To Resistor, Lot To Lot, And Wattage Size To Wattage Size.

Statistical Reliability . . . a very high degree of statistical reliability is achieved by using *one* highly controlled deposition and manufacturing process to obtain the complete range of resistance values for the series.

COMPARATIVE PERFORMANCE

	JC Precision	Wire-Wound Precision
Resistance-Temperature Stability	±15ppm/°C	+20ppm/°C
Frequency Response (rise time)	10.000 KC or better	generally limited to 50KC
Size-to-wattage ratio (for typical JC 750)	¾ watt at 85°C	½ watt at 85°C
Resistance Range for typical JC 750	2	1

SPECIFICATIONS FOR JC PRECISION RESISTORS

Resistors of any resistance value within the ranges of tolerances specified below are available for short time delivery.

Standard TC: 0 ± 15PPM/°C (0° to +85°C)
Standard tolerances 0.1% to 1%

Standard lead material is 100% low oxygen content copper, gold plated over a nickel strike.

Long-Term Stability: Long-term stability characteristics have been determined in an extensive three-year test program. Data collected establishes that JC resistors will remain within their initially manufactured tolerance during a lifetime of normal service stresses. Detailed information may be obtained through your sales representative.

Built In Reliability: Since Airco Speer Electronic Components is not a broadline metal-film resistor manufacturer, all metal-film manufacturing operations can be devoted to providing customers with very tight temperature coefficients, and tolerances. The Jeffers JC resistor series enjoys a high degree of specialized attention, including: manufactured under qualified "white room" conditions • rigid material inspection, in-process quality control, final inspection, and quality assurance testing • documented lot control, providing complete traceability of materials and operations used in the production of all resistors.

For very precise applications Airco Speer offers a variety of temperature coefficients, tolerances and tracking options in its JXP precision resistor series. **Networks.** The superior performance advantages of Jeffers precision resistors are also offered in packaged networks which offer further space-saving performance and reliability advantages. SPEER FIXED COMPOSITION RESISTORS

Airco Speer resistors are made on modern high speed equipment which molds component material into one integral, dense unit. Heavy pure tin-coated copper lead wires, thermosetting bonding resins, finely divided inorganic fillers, and specially produced and treated high conductivity materials such as carbon blacks are the materials used.

During the molding process, preformed insulating shells of bonded inorganic fillers are filled with carefully adjusted conducting compounds. The binders and fillers of both shell and core are completely compatible and, under high pressure, allow the formation of an inseparable bond between core and shell. The thermal characteristics of shell and core are essentially equal.

After high pressure molding, the "green" resistors are cured in precisely adjusted, indirectly heated continuous tube furnaces. The resin cure is complete and the final resistance of the unit is thereby fixed. A vacuum and pressure impregnation of a special high temperature material develops maximum protection against moisture penetration.

The special impregnant used is completely stable under all operating conditions.

Airco Speer resistors are color coded with special paints developed to provide a high degree of solvent resistance.

All Airco Speer resistors have lead wires of high conductivity copper with a solderable coating of heavy pure tin. The wires are completely precoated before assembly, so that the solderable surface is unbroken over the entire area. The tin coat is controlled to a thickness of .0003"-.0008", several times as heavy as that on ordinary tinned wire. The use of pure tin affords superior storage life and offers the ultimate in low temperature solderability.

The impregnated resistors are measured on high speed automatic resistance sorters and classified into appropriate resistance nominals and tolerances. The color bands are applied after sorting.

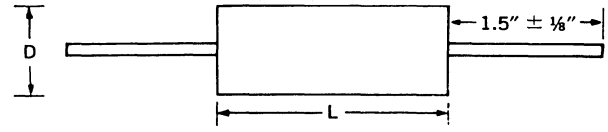
JEFFERS JXP PRECISION METAL FILM RESISTORS

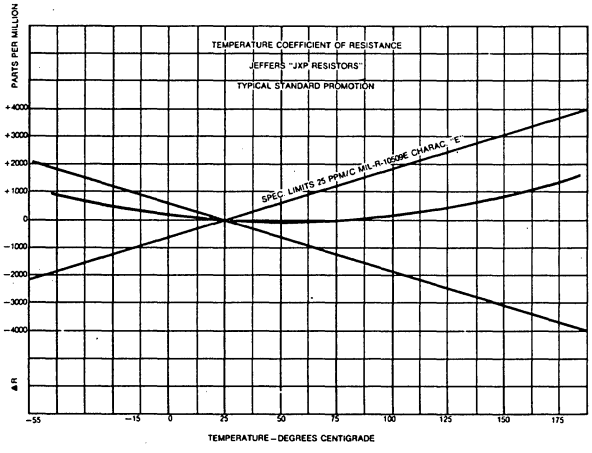
All JXP resistors meet or exceed the requirements for Characteristic E (± 25 ppm/°C) metal film resistors as set forth in MIL-R-10509.
Resistors of any resistance value within the ranges specified in the accompanying table are available for short time delivery. The resistance ranges specified for the commercial listings below are extended beyond standard military ranges. Performance within these ranges, however, is considered to be equivalent to those within military ranges.



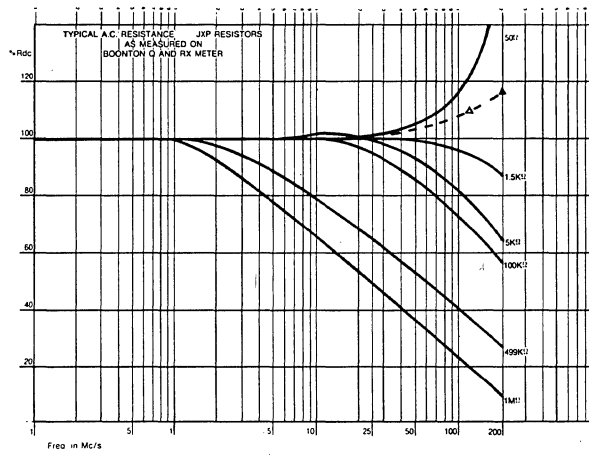
Wattage at 125°C	Military		Commercial		Length A Max.	Diameter B Max.	Axial Lead # Size
	Style	Range	Style	Range			
1/10	RN55E	49.9Ω - 100K	JXP55	25Ω - 150K*	0.260	0.115	≈22 AWG
1/8	RN60E	49.9Ω - 499K	JXP60	35Ω - 500K*	0.400	0.136	≈22 AWG
1/4	RN65E	49.9Ω - 1M	JXP65	30Ω - 1.5M*	0.590	0.210	≈22 AWG
1/2	RN70E	49.9Ω - 1M	JXP70	35Ω - 2.0M*	0.730	0.250	≈20 AWG

Special tolerances to ±0.02%. Standard TC: 0 ±25 ppm/°C (−55°C + 175C). Special TC's to ±5 ppm°C over limited temperature spans.
*Extended ranges may be supplied on special order.
Standard lead material is 100% tin coated low oxygen content copper with a non-borated gold interface.
Other lead materials can be supplied as special order items.

TEMPERATURE COEFFICIENT OF RESISTANCE FOR TYPICAL STANDARD PRODUCTION JXP RESISTORS



TYPICAL A.C. RESISTANCE AS MEASURED ON BOONTON Q AND RX METER



Airco Speer capability as a leading producer of low temperature coefficient, precision resistors is derived from significant proprietary advances in metal film technology and the establishment of a manufacturing facility and product philosophy that is devoted exclusively to production of only the highest grade of precision resistors. This concentration of effort has eliminated the necessary compromises in equipment and processes and reduced the diversion of skills which would otherwise be necessary for the accommodation of a multi-grade product line.

In other words, Airco Speer makes all its parts to a T.C. of 25 **ppm** or less. It does not "sort" to find production lots which will hopefully contain a large percentage of 25 **ppm** units.

This product plan has resulted in some important contributions to quality and economical precision resistor manufacture. For example:

All operations in the manufacture of JXP precision resistors are carried out under qualified white room conditions, an important factor in statistical reliability.

Shortest delivery available for precision resistors is a natural result of the efficiencies of a manufacturing operation that deals with only one grade of product.

In addition to manufacturing facilities, Airco Speer has complete environmental test facilities, instrument calibration and certified measurement ability for precision resistor evaluation.

You can order standard or custom-tailored JXPs, matched sets —even networks and packaged assemblies. Write:

AXIAL LEAD VITREOUS RESISTORS

Available in three sizes 3, 5 and 10 watts, Series VC3D, VC5E and VC10F. Axial lead resistors are particularly adapted to printed circuit, terminal board, and point-to-point wiring applications. These resistors save considerable space because of the elimination of mounting brackets and terminal lugs. Standard resistance tolerance is ± 5% for 1 ohm and higher and tolerance below 1 ohm is ± 10%. Attractively packaged in a newly designed carton particularly adapted to this new axial lead resistor, beautifully finished with Clarostat's new vitreous shade of teal green.

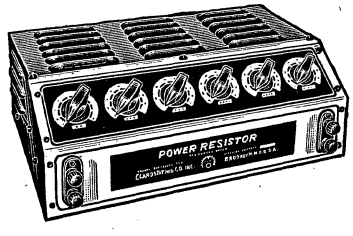
POWER RESISTOR DECADE BOX



The Resistance Decade Box, Model 240-C for bench use — Model 250 for rack mounting, provides any resistance from 1 to 999,999 ohms for working circuits at the flip of a switch. Six front-panel dials enable selection in 1 ohm increments, the total value being read directly from the dial. Each decade has a power rating of 225 watts maximum, 1,000 VDC or 660 VAC maximum.

Resistance changing switches are of the type that prevent a resistance breakdown between steps, thus protecting delicate meters and measuring instruments in the circuit. Knobs indicate the resistance value being used at a glance.

Clarostat GREENOHM Power Resistors are used throughout. These components are wire-wound power resistors on ceramic tubes and coated with an exclusive Clarostat inorganic cold-setting cement, providing the most rugged, long-lasting, trouble-free power resistor available. The resistors are mounted in rigid metal supports.

Overall length: 240C: 13" long x 8½" deep x 5¾" high, weight 11½ lbs. 250: 19" long x 13¾" deep x 7" high (fits in standard 19" relay rack), weight 18½ lbs.

SUGGESTED USES: Resistance determination, Load Resistance, Meter Multiplier, Calibrating Meters, Providing any desired ohmage as a universal power resistor.

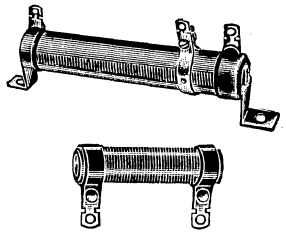
"GREENOHM"* WIRE-WOUND RESISTORS



FIXED TYPES Wire-wound resistors for most rugged applications. Will withstand tremendous overloads and temperature changes without alterating resistance values or appearance. Wire windings on high grade ceramic tubing and coated with special inorganic cement. In accordance with EIA standards, overall tolerances are ± 5% for resistors of 50 ohms and higher. For resistors of 49.9 ohms and lower, overall tolerances are ± 10%.

ADJUSTABLE TYPES Same electrically and mechanically as Fixed types, but incorporating sliding band or bands for tapping any desired resistance values. Slider band tightened by means of screw. In accordance with EIA standards, overall tolerances are ± 10%.

PRECISION WIRE WOUND RESISTORS & NETWORKS

Charles T. Gamble Industries has engineered and designed non-inductive precision wire wound resistors to meet the requirements of Mil-R-93D. These resistors are completely sealed against the effects of high humidity and salt water immersion cycling. The material used in the manufacture of our resistors has a very high dielectric strength. The bobbin material used in winding the resistors is one and the same as the encapsulating material. All resistors use resistance wire with very low thermal E.M.F. to the copper leads. Where thermal effects can be disregarded, welded construction with nickel alloy leads may be specified.

Standard temperature coeficient is ±10 PPM/°C. Lower T.C.'s, and T.C.'s as high as 6000 PPM/°C can be supplied.

Tolerance available (non power styles): 1%, 0.5%, 0.1%, 0.05%, 0.025%, 0.02% and 0.01%. Resistors with tolerances of 0.1% and below are stabilized by artificial aging and temperature cycling.

NETWORKS: RC NETWORKS, LADDER NETWORKS, VOLTAGE DIVIDERS, BINARY NETWORKS

Sub-miniature Axial lead Precision resistors have been designed for applications where space is a prime factor.

Encapsulated printed circuit resistors are designed for printed circuit board application, where space is a factor.

Radial lug type resistors have been designed to meet the requirements of Mil-R-93D.

All resistors are hermetically sealed with epoxy resin to protect the windings against the effects of high humidity and salt water immersion cycling. Resistors can either be inductive or non-inductive wound.

The materials used in the construction of radial lug type resistors are identical to those used in the construction of axial lead types.

These resistors are supplied with a thru hole for mounting to the chassis by means of a #6 thru bolt.

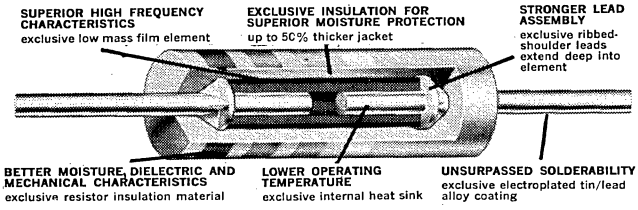
CARBON COMPOSITION RESISTORS

DIVISION OF TRW INC.

PERFORMANCE ADVANTAGES YOU GET ONLY FROM IRC

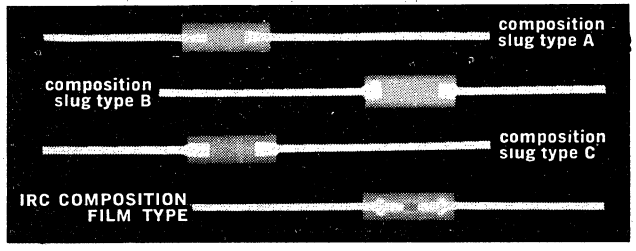


STRONGER LEAD ASSEMBLY

There is up to 50% more molding around the element of an IRC carbon composition resistor than is provided by other brands. Also, the end molding is correspondingly thicker.

As illustrated, *IRC's ribbed shoulder leads are deeply imbedded in the molding to withstand twist or pull-out.* Leads are thermally bonded to the element to form an assembly that is failure-free under MIL-R-11 and MIL-R-39008 shock, vibration and acceleration tests.

During destructive tensile tests on the RC20 size, for instance, other Fixed Composition resistors failed at forces averaging 22, 18 and 28 pounds respectively, as shown in the X-Ray photograph. IRC resistors withstood forces averaging 33 pounds. Even at that force, IRC leads did not pull out. The lead wire broke outside the body.



UNSURPASSED SOLDERABILITY

IRC's exclusive tin/lead alloy electroplating process assures a lead with a smooth, uniform surface. This means your assemblies will go together without the possible aggravations of lumps and voids in the alloy coating sometimes found on hot tin dipped leads.

The tin/lead alloy composition used on these military and commercial resistor leads was specifically chosen not only for its solderability but also for its excellent shelf life. Even after two years of shelf life, these resistors were soldered into printed circuit boards with no problem. Favorable volume procurements can be made without concern for long term soldering degradation.

Welding? IRC resistors are available in special lead materials. Contact factory for specifications, minimum quantity requirements and prices.

GREATER MOISTURE PROTECTION

IRC's resistance element is a carbon composition film that is thermally bonded to a glass body. This exclusive IRC design permits up to 50% more molded protection completely around the resistance element. This provides a longer lead path through the molded body to protect the element from moisture.

The thick carbon slug used in other Fixed Composition Resistors restricts the volume of the molded jacket around the resistive element to stay within the MIL-R-11 size limits. Moisture protection is thus reduced.

The molding material was developed by IRC specifically for superior moisture, electrical and mechanical characteristics.

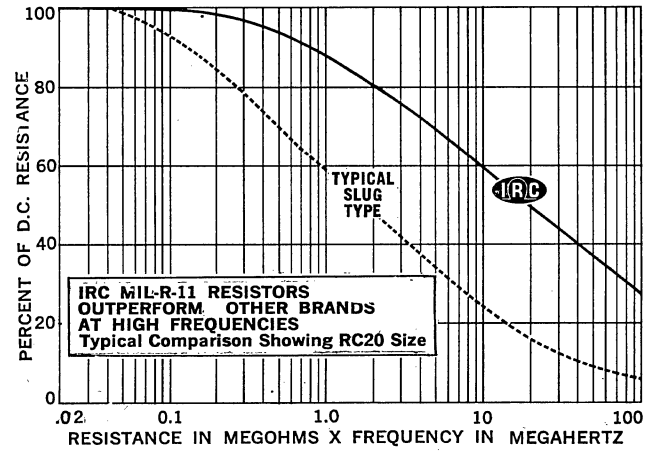
When tested to MIL-R-11 moisture resistance requirements, IRC's ½ and 1 watt fixed composition resistors exhibit resistance changes of less than 3%. Five times better than the 15% MIL allowance. Under more stringent conditions of 75°C, 100% RH for 120 hours, resistance changes are typically less than 5%. Even IRC's small ¼ watt unit has moisture resistance changes well within MIL limits.

SUPERIOR HIGH FREQUENCY CHARACTERISTICS

The best high frequency characteristic in a Fixed Composition Resistor is achieved when the ratio of cross-sectional area to the length of the resistor is minimized. IRC's film element has the smallest cross-section and fewest carbon binder contacts of all carbon composition resistors.

IRC's low mass resistance element assures inherently low shunt capacitance and, as a result, superior performance at high frequencies. As an example, in high frequency equipment this performance advantage results in better pulse shaping with less broadening and truncation, and faster response time.

IRC outperforms other brands to a significant degree. A comparison of typical performance based on RC20 size resistors is shown in the chart below.



BETTER HIGH TEMPERATURE CHARACTERISTICS

IRC's resistance element is a carbon film that is bonded to a glass substrate at approximately 1000°F. This means the element has been "conditioned" to high temperature exposure.

As may be seen in the X-Ray photos shown under "Stronger Lead Assembly", the talon leads go deep into the resistor body. This conducts heat away from the "hot spot" and out of the resistor.

Even after 1,000 hours at 100°C and full rated power, resistance changes are less than the 10% MIL allowance. After 1,000 hours at 150°C, no load, resistance changes are still well within MIL limits. At 200% rated power at 70°C ambient, resistance changes are typically less than 10% after hundreds of hours of operation. Resistance temperature coefficient is typically less than 0.064%/°C over the range of 25°C to 150°C.

EXCELLENT QUALITY — HIGHEST RELIABILITY

IRC's ¼ and ½ watt RC's were the first resistors to be offered against the Established Reliability Specification MIL-R-39008. The tests needed to assure continuing performance to this specification combined with MIL-R-11 testing and tests of greater severity have provided many millions of unit-hours of test data.

IRC has always maintained an extensive quality control program for its line of resistors. All production processes are subjected to rigid test standards to assure a continuing high level of product performance in the field.

TYPE RC CARBON COMPOSITION RESISTORS

PERFORMANCE CHARACTERISTICS

These are in relation to MIL-R-11 and/or MIL-R-39008 specification limits. A performance span or range is given for each important characteristic. You know in advance the typical limits within which IRC carbon composition resistors can be expected to perform. Ask for Catalog "D".

The performance data are based on many thousands of individual tests made on random samples taken from production. The resistors are tested to MIL-R-11 and/or MIL-R-39008 and to other tests of greater severity.

APPEARANCE

IRC carbon composition resistors have a glossy brown, smooth body. The molded jacket has close dimensional tolerances for trouble-free use in high speed lead forming and inserting machines. There is no wax coating to clog equipment.

IDENTIFICATION

Resistance values are clearly indicated by standard EIA/MIL Color Code bands. Solvent-resistant paints are baked on to provide distinct, permanent color bands.

STANDARD RESISTANCE VALUES

Type RC resistors are supplied in all EIA/MIL standard values, subject to the minimum and maximum values for each type. (See table.) Other values are available on special order.

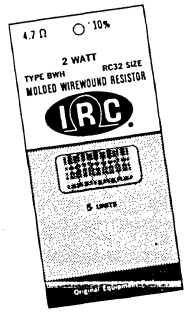
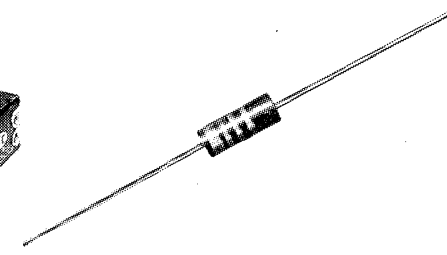
MOLDED WIREWOUND RESISTORS

DIVISION OF TRW INC.



AVAILABLE IN SNAP PAK OR 50 PAK



OUTPERFORMS FIXED COMPOSITION RESISTORS

IRC's BWH molded wirewound resistor can be used in most applications normally filled by the lower values of composition resistors. The BWH exhibits the inherent stability, reliability, and long-term life characteristics of a wirewound unit. It also provides low resistances unattainable in composition resistors.

Exceptionally stable, small and completely insulated the BWH meets or exceeds all MIL-R-11 performance requirements. Because it is the RC-32 size it will fit any 1 watt composition resistor processing equipment.

BWH resistors are packaged on the exclusive IRC GRIP STRIP®, in multiples of 10 and 50, and in the new SNAP PAK (see page 1159) in multiples of 25.

The rating of this resistor is:

½ watt at 137°C. ambient
1 watt at 115°C. ambient

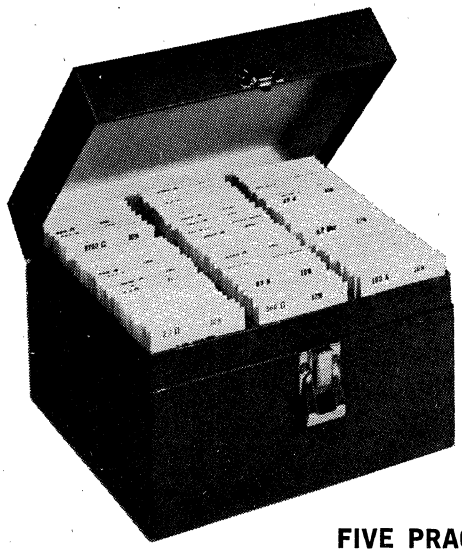
FILE-O-PAK DEALER STOCKS

DIVISION OF TRW INC.

NEW STOCKING CABINET FOR COMPONENTS IN SNAP PAK



Sturdy new dealer stocking cabinets are available with a variety of practical FILE-O-PAK resistor assortments. Constructed of heavy cardboard, cabinet is covered in rich simulated red leather-like covering. Metal hinges and fastener. Heavy dividers provide nine bins for practical self-indexing of SNAP PAK. Dimensions are 8" wide, 7½" deep, 5½" high (lid closed).

SNAP PAK CONDENSES RESISTOR STOCKS

Resistors in SNAP PAK permit practical stocking in handy, compact arrangement. Package provides complete identification, cross reference, resistance value and tolerance. Resistors stay put—do not fall out when one or more are removed.

FIVE PRACTICAL RESISTOR STOCKS FOR DEALERS

IRC ASST. NO. 8 — 20 VALUES OF ½ WATT RESISTORS. Most often used resistor values cover nearly one-half of the usage of resistors. Parallel and series connections will provide coverage of most standard 10% values. Ten each RC20 ½ watt resistors, 10% tolerance, in following values: 10, 22, 47, 100, 220, 470, 1000, 2200, 4700, 10K, 22K, 47K, 100K, 220K, 470K, 1.0M, 2.2M, 4.7M, 10M, 22M. With good-looking stocking cabinet.

IRC ASST. NO. 9 — 20 VALUES OF 1 WATT RESISTORS. Best selling resistor values cover nearly 50% of resistor values used. By parallel or series connections, 80 values of 10% resistors can be covered. Five each RC32 1 watt resistors, 10% tolerance, in these values: 10, 22, 47, 100, 220, 470, 1000, 2200, 4700, 10K, 22K, 47K, 100K, 220K, 470K, 1.0M, 2.2M, 4.7M, 10M, 22M. With sturdy stocking cabinet.

IRC ASST. NO. 10 — 61 VALUES OF ¼ WATT RESISTORS. Stock includes 61 10% values of RC07 ¼ watt resistors from 10 ohms to 1.0 megohms. Because of the small size of these resistors, they are ideal for replacement in transistor radio and similar compact equipment. Suitable for single-ended replacement by bending one lead over resistor body and retaining by spaghetti tubing over lead and resistor body.

IRC ASST. NO. 11 — 84 VALUES OF ½ WATT RESISTORS. All RC20 ½ watt 10% resistors from 2.7 ohms to 22 megohms. Small enough for many transistor radio replacements and large enough for most radio and TV needs. Resistors provide more than usual insulation giving better protection from humidity. Special heat-sink action of leads assures better high temperature operation and stability. Stocking cabinet included.

IRC ASST. NO. 12 — 84 VALUES OF 1 WATT RESISTORS. Stock includes all 10% values of RC32 1 watt resistors, 10% tolerance, from 2.7 ohms to 22 megohms. This is a comprehensive stock of units frequently used by service technicians to replace lower wattage resistors which have failed. Provided increased insulation and heat-sink leads for stable operation in hot, humid conditions. Practical stocking cabinet is included.

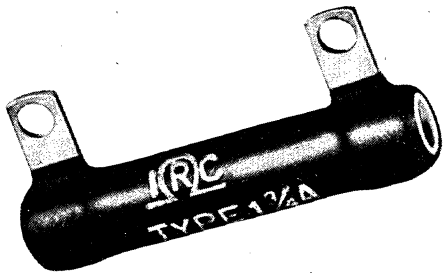
TUBULAR POWER WIREWOUND RESISTORS

DIVISION OF TRW INC.



RESISTEG COATED POWER RESISTORS need no derating. They operate at full rated power even at high resistance values. Other features include heat resistant terminals for easy soldering, ceramic cores that withstand shock and are impervious to moisture, heavy windings that handle overloads without burnout, and standard size spring loaded push-in brackets for easy mounting on sizes of 25 watts and over.

IRC Tubular Power Wirewound Resistors are standard tubular construction with lugs and/or leads for use in general applications. They are used in DC and low frequency AC circuits where appreciable power must be dissipated:

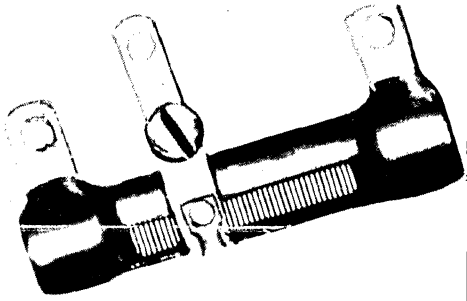
ADJUSTABLE & MILITARY POWER RESISTORS

IRC®

DIVISION OF TRW INC.

ADJUSTABLE RESISTANCE TYPES



IRC Adjustable Power Wirewound Resistors are standard resistors with a track of exposed wire to allow for the adjustable feature. The track or slot is made by masking a section of the winding before coating, and then removing the mask after the coating has cured. No wire brushing, which could damage the resistance wire, is used.

The IRC adjustable feature provides the ideal solution to odd resistance values and to handling a variety of line voltages. One or more adjustable lugs may be used for voltage divided applications.

POWER & FUSE RESISTORS

DIVISION OF TRW INC.

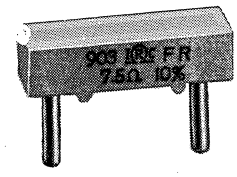
FUSE RESISTORS

These special resistors function as a resistor under normal conditions, and as a fuse under overload conditions.

Attractive new SNAP PAK style package. Back of card contains complete replacement information.

Exact Duplicate Original Equipment Part as used in Auto Radios. .33Ω and .68Ω in insulated fiberglass sleeve, 47Ω in rectangular ceramic case. Precisely wound element and superior lead solderability.

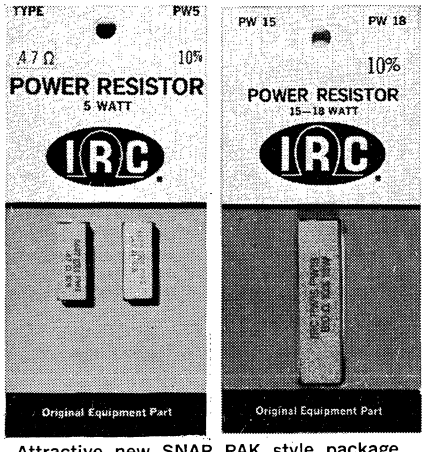
FR.33 — .33 ohm
FR.47 — .47 ohm
FR.68 — .68 ohm



FR5.0*— 5 ohms
FR5.6 —5.6 ohms
FR7.5 —7.5 ohms

* Suitable for 4.7Ω fuse for resistor applications.

Fuse resistors are used extensively as a surge-limiting resistor in voltage doubler circuits of TV receivers. Installation of an IRC Type FR fuse resistor in a TV set will prevent over-loading of more valuable components and possible fire due to a short circuit. The compact, modern design of the IRC fuse resistor measures only $1\frac{25}{64}$" x $1\frac{1}{32}$" x $\frac{3}{8}$". This unit is completely insulated in a rectangular ceramic case, and equipped with plug-in terminals.



Attractive new SNAP PAK style package holds 2 each PW5 or PW10, one of PW18.

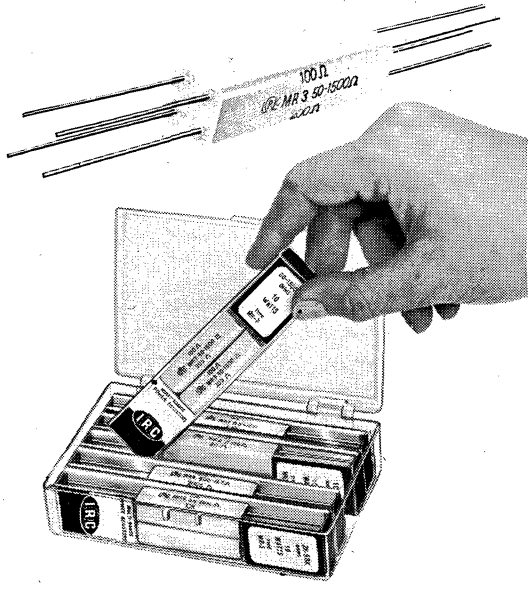
These popular axial lead power resistors are the industry favorites for 5 and 10 watt applications. The compact shape fits among other components more easily. The axial lead design speeds installation. And, the superior solderability of the terminals assures sound connections every time. A precisely wound element is sealed in a ceramic case — fully protected and insulated. Conservative rating permits continuous operation at full power. Resistance, wattage and tolerance are permanently marked on resistor body. Standard tolerance is 10%.



MULTI-RANGE POWER RESISTORS

Up to **47** values from a single resistor. 5 multi-range resistors give complete 10 watt coverage . . . 200 *values from ½ to* 50,000 *ohms*. No delays for a particular value, and you don't tie up inventory with odd values. Ideal for in-home servicing and weekend shop work.

Four-wire wound elements are sealed in a steatite housing. It's simple to solder a basic interconnection for the required value, and cut off unused terminals. Connection diagrams included.

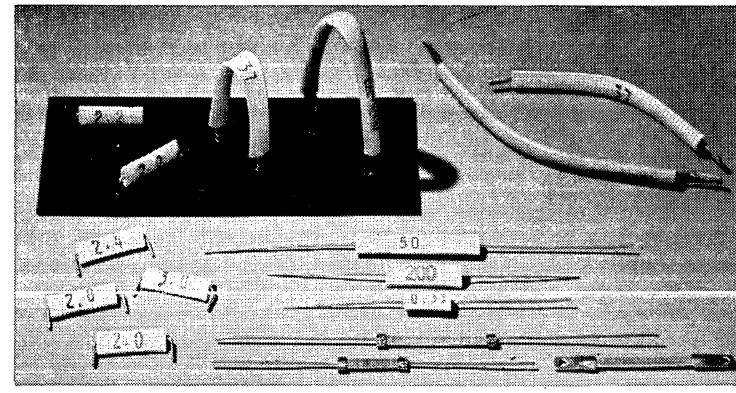
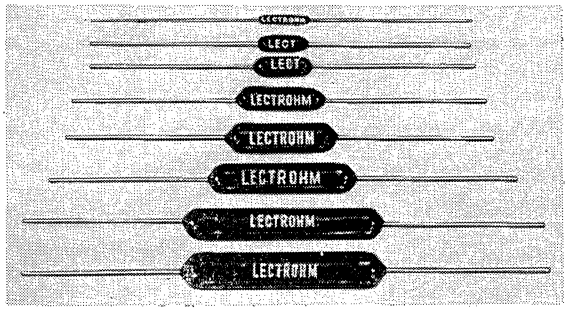
OVALS

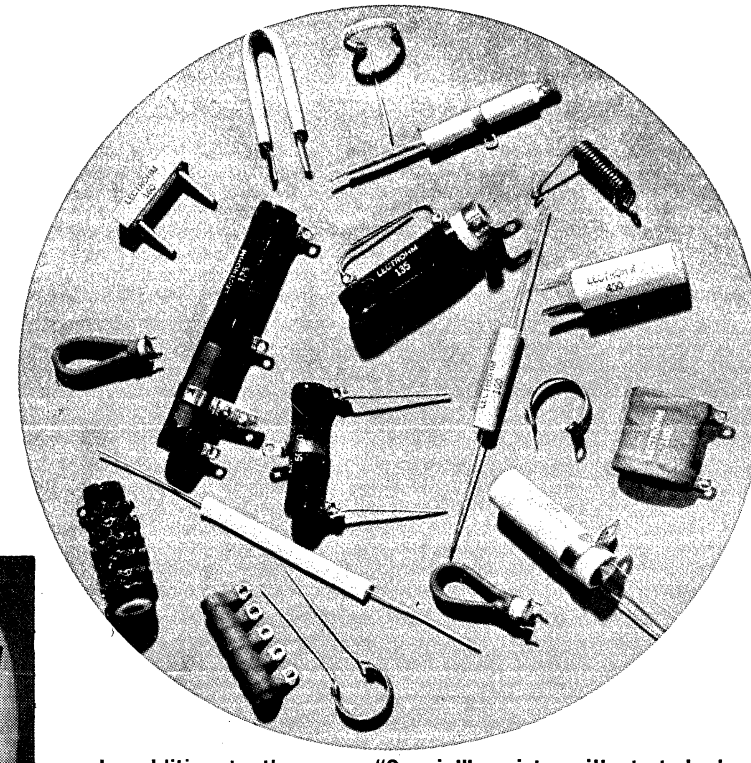


FLEXIBLES



AXIALS

LECTROHM, while manufacturing the standard vitreous line, is also producing whole new groups of types, each designed to solve a special problem. Miniaturization and printed circuit restrictions in space and ventilation no longer are complicated by conventional power resistor size standards. New coating materials and winding methods developed by LECTROHM permit an infinite variety of configurations yet retain operating and life characteristics expected of the finest grade vitreous enameled types. LECTROHM engineers will fit the resistor size and shape to your design.



In addition to the many "Special" resistors illustrated above, LECTROHM manufactures the complete line of standard vitreous fixed and adjustable wire-wound resistors from 5 to 200 watts.

These widely-used fixed wire wound vitreous enameled resistors have solidly anchored welded tabs (lugs) and shock-absorbing mounting brackets to withstand vibration. Multi-layer vitreous enamel coating locks the uniformly-wound resistance wire in position and also seals out moisture. MEMCOR resistors have a high-temperature stability and a compatible coefficient of expansion which prevents crazing and cracking.

MEMCOR resistors have a standard tolerance of ±5% on all values above one OHM and a ±10% tolerance on resistance values lower than one OHM (available in closer tolerances).

All MEMCOR resistors listed in this section manufactured to the rigid requirements of MIL-R-26 Specifications . . . MEMCOR resistors meet and exceed all requirements of this specification.

FR and FRL TYPES

MEMCOR fixed wire wound vitreous enameled types in 5, 10 and 20 watt sizes (FRL) are light enough to be mounted by attached leads and are also available without (FR) tuned leads.

ADJUSTABLE VALUE RESISTORS

MEMCOR adjustable resistors are used in applications where it is necessary to make adjustment in resistance periodically . . . where intermediate values of resistance are needed . . . or when multi-tabs are required. The AR types are especially useful in laboratories for experimental work, circuit design, etc.

A section of the winding is exposed on one side to enable the adjustment band to make contact at any desired point. This adjustable band **should not** be moved unless the screw holding it in position is completely loosened to prevent abrading or possible damage to the resistance wire.

Adjustable lugs are formed to the exact contour of the body of the resistor to assure positive contact with the exposed section of winding. Standard adjustable bands are screw-driven style and have an embossed area on the lug.

Special adjustable lugs are available with a silver contact . . . also, bakelite thumb screw type bands are available.

The AR wattage ratings (and the ±10% tolerance) given in this section are for **the entire** resistor. Never exceed the maximum rating through any portion of the resistor.

OVAL (FLAT CORE) RESISTORS

MEMCOR wire wound flat core resistors are applicable for individual and/or stack mounting. Their high watt rating per unit of space and the bracket construction which facilitates stacking (integral mounting brackets are supplied as standard)... make the MOR and OR types space savers par excellence.

The line of ovals (OR) was designed particularly for applications where available space is limited... and the supplementary line of midget ovals (MOR) are very desirable for applications where the size of the components must be kept to an absolute minimum. The through bracket helps dissipate heat and reduces hot spots. This permits higher wattage dissipation without requiring additional space.

When stack mounted, the OR and MOR resistors should be derated. For an ambient temperature not higher than 40°C. the maximum rise of these resistors will not exceed 300°C. when mounted on a steel panel.

Tapped or adjustable ovals are available.

MOULDED SILICONE RESISTORS

These resistors will operate at 350°C. (660°F.) and will withstand thermal shocks to minus 55°C. Because of the moulded construction the resistors are effectively hermetically sealed and will withstand severe moisture conditions without deterioration.

The construction of the resistors are uniform in all dimensions within a few thousandths of an inch, which facilitates their use in automatic-insertion machinery... for which use they may be obtained specially packaged. They will improve the appearance of any assembly in which they are used.

Temperature co-efficients of plus or minus 20 parts per million per C. degree are standard.

The moulding compound used in these resistors was developed through research and development extending over several years, and represents a marked advance in the "state-of-the-art" for such compounds.

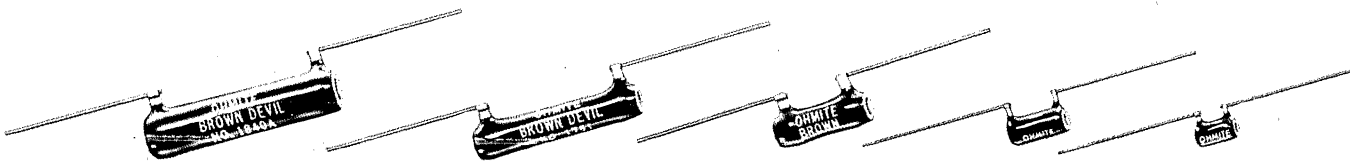
OHMITE type 200 *brown devil*® fixed resistors



BROWN DEVIL® (Type 200) resistors, are vitreous enameled, wirewound units long famous for ruggedness and durability in small power resistors. With the emphasis towards miniaturization and the current industry trend towards higher operating temperatures, Ohmite has been able to increase the ratings on two Brown Devil sizes. The 5 watt size is now rated **8 watts** and the 10 watt size is now rated **12 watts**. The 20 watt unit retains the same rating. The higher ratings may be confidently applied to any 5 or 10 watt unit now in the possession of users or distributors. At this time also, to meet the demand for lower wattage units, Ohmite introduces two, new, small stock sizes — 3 and 5¼ watts.

Standard resistance tolerance is ±5% for values 1 ohm or higher; ±10% for values below 1 ohm. Tinned leads 1½" long: 3 and 5¼ watt, 20 AWG; 8, 12 and 20 watt, 18 AWG.

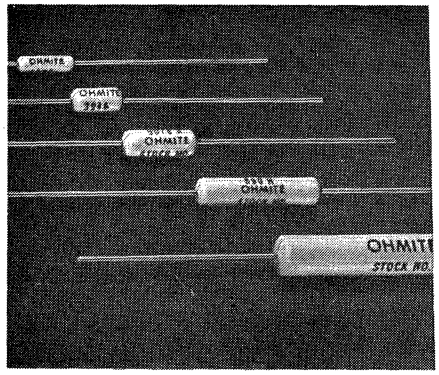
OHMITE series 99 MOLDED axial lead vitreous enameled resistors



- **FIRST MOLDED WIREWOUND, VITREOUS ENAMEL RESISTOR**
- **INSULATED! Meets 1000 VAC Test**
- **WITHSTANDS 1500°F Temperatures without Distortion**
- **RESISTS Chipping, Breaking**
- **VITRIFIED MARKINGS, Resist Abrasion and Active Solvents**
- **UNIFORM SIZE Permits Clip-Mounting with Significant Heat Sink Benefits**
- **HIGH OVERLOAD CAPABILITY**

An exclusive technique (U.S. Patent No. 3,229,237) permits application of the vitreous enamel coating by **molding** instead of the conventional "dip" process. The dimensionally consistent and thicker coating that results, guarantees a 1000 VAC insulation rating plus unparalleled capability for withstanding very high temperatures, high humidity and immersion in salt solution.

These resistors are normally mounted by their axial leads. However, their consistent form also permits mounting in clips with heat sink benefits up to 100% (see "Clips" lower left). Resistor markings are also vitreous and will not burn off even under extreme overloads. Resistance tolerance is ±5%. Series 99 resistors meet the requirements of MIL-R-26 for "insulated" resistors. See Catalog 101 or Catalog 50 for specific MIL types.

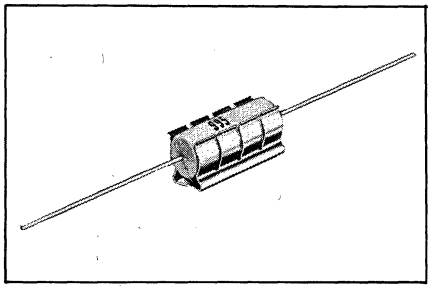
MOUNTING CLIPS



Uniform shape and consistent dimensions of Series 99 and 88 (pages 6-7) resistors, permits them to be conveniently mounted in clips. If the clip is on a metal surface, the wattage capability of the resistor can increase by as much as 100%. Holes in clip base permit fastening to chassis by means of machine screws, eyelets or rivets.

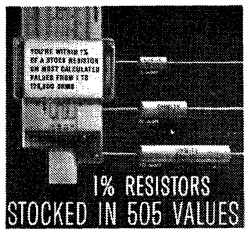
OHMITE type 884 Riteohm® Resistors—1% tolerance



molded for uniform shape and size

miniature precision resistors—1% tolerance

OHMICONE® molded • wirewound • aged for stability • insulated for 1000 volts • low T.C.

Type 884 Riteohm® Resistors are stocked in power ratings of 3, 5 and 10 watts depending upon resistance. Single layer wound on ceramic cores, Riteohm resistors feature a pressure-molded coating of tough, resilient Ohmicone® silicone-ceramic material which meets the MIL-R-26, 1000 VAC insulation test. Riteohms are aged for long term stability and exhibit negligible inductance at audio frequencies. Temperature coefficient of resistance is 0±10ppm/°C[1] for most values. Values shown are based on the MIL-Bell system of standard values. For non-standard values, closer tolerances, etc. contact your local Ohmite office.

OHMITE type 270 vitreous enameled fixed resistors

These lug type resistors are wire-wound on high quality ceramic cores, protected and insulated by Ohmite vitreous enamel — the time-proved standard covering that is the best conductor of heat for a material which must also be a good electrical insulator.

Resistance tolerance is ±5% for values 1 ohm or higher; ±10% below 1 ohm.

Wattage ratings are for use in free air. When resistors are mounted in closed spaces or where the circulation of air is restricted, they should not be used at more than one-half rating. Currents and voltages for reduced ratings can be obtained by multiplying full rating by the following factors: 75% load = .86, 66% = .81, 50% = .71, 33% = .57, 25% = .50.

See Catalog 50 for MIL-R-26 styles. Mounting brackets are automatically supplied in individual unit packs; supplied only when specified in bulk packs.

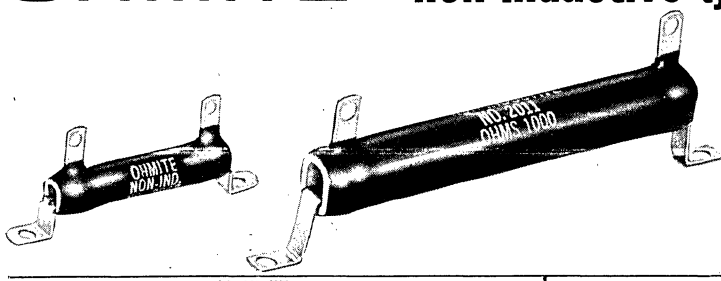
OHMITE non-inductive type 270N vitreous enameled fixed resistors



These non-inductively wound power resistors are widely used at radio frequencies for such purposes as dummy antennas, terminating resistors for antennas, and in diathermy apparatus. Their properly proportioned Ayrton-Perry type windings, reduce the inductance to low proportions (less than 1% of regular solenoid type resistors) while the distributed capacity is small. R.F. resistance is the same as the D.C. resistance over the useful range of frequencies.

Change of impedance with frequency is so slight that the resistors can be used throughout the broadcast band and at even higher frequencies, depending on the particular resistance to be used. All the resistors are lug-type tubular units which mount by means of non-magnetic mounting brackets (furnished). Ohmite's high grade ceramic construction and exclusive vitreous enamel coating assure long, reliable performance under full rated load. Resistance tolerance is ±5%.

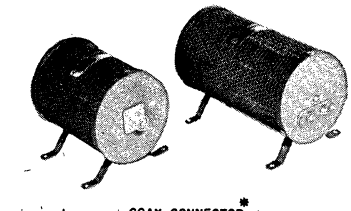
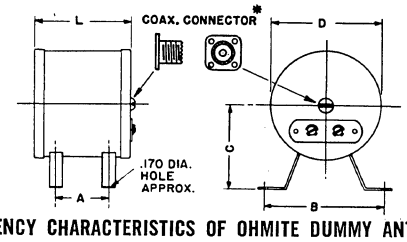
dummy-antenna resistors NON-INDUCTIVE





Ohmite Models D-101 and D-251 Dummy Antenna Resistors provide a simple, accurate, and direct means of measuring R.F. power for the radio amateur, experimenter and manufacturer and for operators of aviation, police and broadcast stations. These units consist of a number of special, vitreous enameled resistors connected in parallel in a concentric arrangement and mounted inside a perforated metal cage. The dummy antenna resistors feature constant R.F. resistance (within their recommended frequency range), low reactance, high wattage dissipation, and compactness. Actual D.C. resistance tolerance is ±5%.

The residual inductance and distributed capacitance have been kept to a minimum, thereby making the natural resonant frequency as high as possible. These factors and the D.C. resistance have been proportioned in such a manner as to give the best possible response characteristics. This resistor may be considered practically a "Non-Reactive Resistor."

mounting brackets for stock resistors

Brackets fit inside the cores of tubular resistors and remain in place by friction. The standard bracket (indicated by stock number without suffix) is cadmium plated steel. An "S" suffix on the stock number indicates spring steel; a "B" suffix indicates brass. Spring steel brackets are excellent where vibration is involved; brass brackets are employed with noninductive resistors or for corrosion-resistance. A pair of **standard** brackets is supplied with each individually boxed resistor sold through distributors but is not supplied with bulk resistor orders. Sold in lots of 100 pieces (50 pair).

OHMITE dividohm® type 210 adjustable vitreous enameled resistors

"Dividohm" resistors make ideal voltage dividers for original equipment and replacement in transmitters, rectifiers and other apparatus. Such tapped "bleeders" are made by using one or more adjustable lugs, as required. "Dividohms" are also handy for obtaining odd resistance values, for adjusting circuits, and for use on equipment which must be set to meet various line voltages.

"Dividohm" resistors are vitreous enameled resistors on which a narrow strip has been left uncovered to expose a portion of each turn. Contact to any wire in this strip is made by an embossed contact on the adjustable lug (supplied).

WATT RATING: **The stated wattage rating applies only when the entire resistance is in the circuit.** When the adjustable lug is set at an intermediate point, the wattage rating is reduced in approximately the same portion, i.e., if the lug is set at half the resistance, the wattage is reduced by one-half. A safe rule to follow is to make sure that the maximum rated current is not exceeded. This should be carefully checked particularly if the resistor will be used as a voltage divider with several adjustable lugs. Resistance tolerance is ±10% for the total resistance value. See Catalog 50 for MIL-R-26 styles.

adjustable lugs

One "Screw Driver Type Adjustable Lug" is supplied with each unit. Lugs with a silver contact button can be ordered from the table shown below.

MOVING THE LUGS: Lugs always should be loosened completely before moving and not moved except while the current is off, in order to protect the exposed wire from mechanical or electrical injury and to protect the operator from dangerous voltages.

OHMITE type 250 "THIN" vitreous enameled resistors

Ohmite "Thin" Resistors are intended for use in equipment where space is at a premium. They are wound on flat, oval shaped ceramic cores, and covered with Ohmite's exclusive vitreous enamel coating. Resistance tolerance, ±5%.

Integral mounting brackets extend through the resistor core to equalize heat distribution and to conduct heat directly to the mounting surface — provides equivalent wattage with less bulk and in less space. Wattage ratings assume the use of a metal mounting surface. Reduce ratings 15% for non-metallic surfaces.

"Thin" resistors are mounted or compactly stacked by means of bracket studs which are hollow to receive assembly bolts. The load should be reduced for each unit when resistors are stacked or used in confined, poorly ventilated spaces. Total height from bottom of mounting stud to top of resistor is approximately 5/16" for the Standard units and 11/32" for the Miniature units.

For other sizes, closer tolerances, non-stacking brackets, Dividohm adjustable or other features, consult factory.

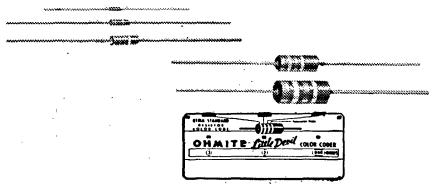
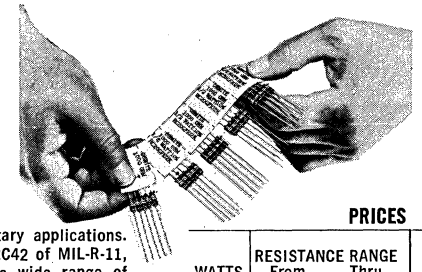
OHMITE *Little Devil*® molded composition resistors on "Tally Tape"®



Color Coder 10¢*

"Tally Tape," Ohmite's wonderfully convenient packaging presently provides for ¼, ½, 1 and 2-watt resistors. Each perforated segment holds 5 resistors — prevents spilling or tangling — simplifies counting — is printed for quick identification — guarantees original, factory-fresh stock.



Now Includes MIL-R-II Types

Little Devils, Ohmite's famous molded composition resistors, find broad use in commercial and military applications. The ⅛, ¼, ½, 1 and 2-watt sizes, which conform respectively to Styles RC05, RC07, RC20, RC32 and RC42 of MIL-R-11, meet all the stringent requirements of this military specification. The five sizes available satisfy a wide range of design and service needs.

Little Devils have molded insulation for high dielectric strength. Noted advantages of these units are great stability, low noise level, low voltage coefficient, high insulation breakdown voltage and rapid heat dissipation. They may be used at full rated wattage at 70°C (158°F) ambient temperature.

Little Devils are available from stock in standard EIA resistance values in the tolerances and resistance ranges shown in the price table. Ratings for maximum continuous RMS voltage drop are high: 150 volts for ⅛ watt units, 250 volts for ¼ watt, 350 volts for ½ watt, 500 volts for 1 watt, and 750 volts for 2 watt units. See "Little Devil" Resistor Assortments, page 14.

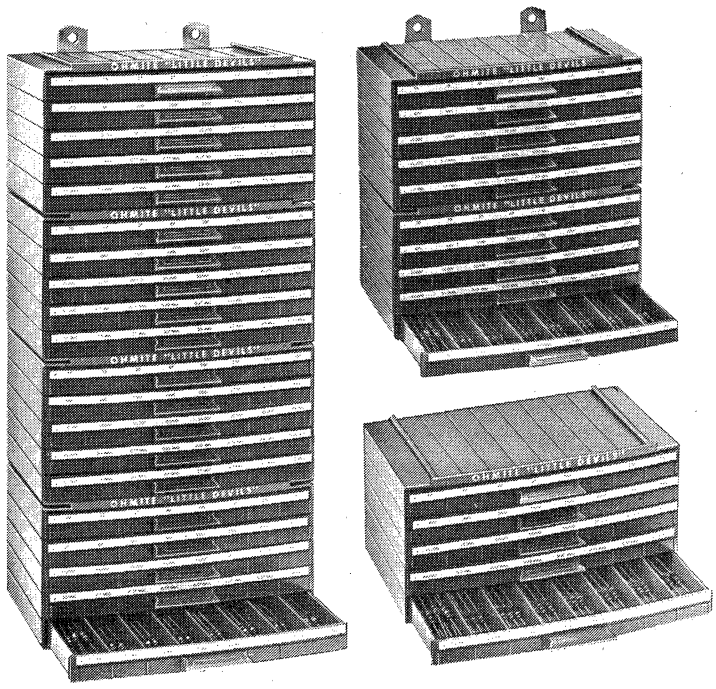
OHMITE *Little Devil*® industrial and service resistor assortments



RESISTORS AND HANDY CABINET FOR THE PRICE OF THE RESISTORS ALONE

Select the composition resistor you need, right on the job from time-saving Little Devil® Assortments. Ohmite now offers **seven industrial** assortments in addition to the four service assortments that have been so popular for many years. In this complete line, there is an assortment to fill every industrial and service need. An attractive plastic cabinet or cabinet assembly is furnished at no extra cost with each assortment. Each drawer of a single 5-drawer cabinet has eight compartments, all individually labeled. Dimensions of the single cabinet are 9" long, 4¾" high, 5¼" deep. Dovetail tops and bottoms facilitate stacking. Cabinet assemblies for industrial assortments are riveted to metal strips which afford rigidity and permit hanging of the unit on the wall.

Of the seven industrial assortments, there are three ±10% tolerance assortments of ¼, ½ or 1 watt sizes each containing 80 values. A two-cabinet assembly is furnished for these assortments. Four 5% tolerance assortments provide 160 values each of resistors in the ⅛, ¼, ½, or 1 watt sizes. A four-cabinet assembly is furnished for each of these assortments.

The four popular **service** assortments provide ±10% tolerance resistors in a single cabinet in ¼, ½, 1 or 2 watt sizes.

Cabinets are factory packed in accordance with the tables shown below.

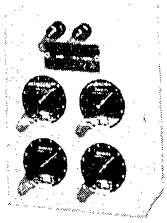
OHMITE determohm® resistance box



The "Determohm" is a convenient resistance box for service, engineering, experimental work and schools. Used widely to determine replacement resistors in radio sets; as a voltmeter multiplier; with ohm-meter; in resistance bridge circuits and in many other applications. Resistance elements are wire-wound resistors selected by four tap switches. The third and fourth decades of Determohm Stock No. 3404, contain 1 watt "Little Devil" composition resistors. The "Determohm" may be connected directly in circuits which do not cause it to dissipate more than one watt for each switch tap connected in the circuit. Compact and sturdy. Enclosed in an attractive grey wrinkle-finish metal case.

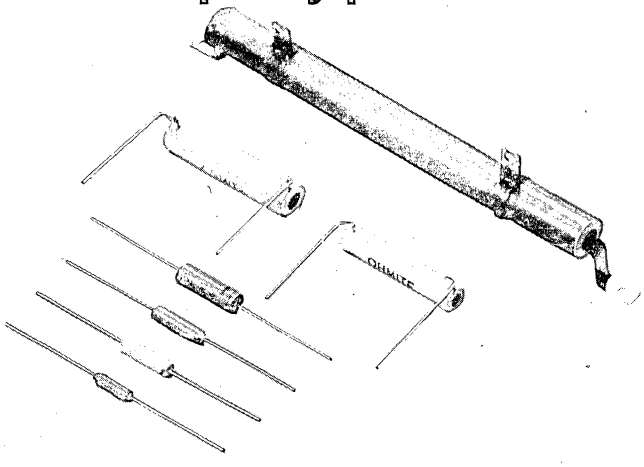
Non-magnetic brackets furnished with each choke.

Prevents high-frequency currents of radio transmitters, diathermy and therapeutic equipment from going out over the power lines and interfering with nearby radio receiving sets. They are used as filters in conjunction with two grounding capacitors of 0.1 microfarad capacity each. The Z-20 Choke is also used at radio receivers to keep out interference. All chokes consist of two, single-layer windings on a single ceramic core, insulated and protected by moisture-proof coating.

radio frequency plate chokes



This series of seven, single-layer-wound, solenoid type radio frequency plate chokes, covers the entire frequency range of 3 to 520 megacycles. The stock number corresponds to the approximate frequency at which maximum efficiency will be obtained, but the chokes may be used at any other frequencies within their operating ranges, as listed in the price table.

Chokes of the four highest frequencies are wound on low power factor plastic cores while the other three units are wound on steatite tubes. Windings are insulated and protected by a moisture-proof coating. The single layer winding is designed to avoid adverse harmonic effects and also prevents breakdown from high r.f. potentials. Non-magnetic mounting brackets are furnished with the largest size, Z-7. The Z-14 and Z-28 have wire leads welded to lug type terminals; the Z-50, Z-144, Z-235 and Z-460 have axial-type wire leads.

Non-magnetic Brackets Furnished with Z-7.
All chokes 1000 ma. rating except Z-14 and Z-28. These are rated at 600 ma.

Any one of these chokes may be selected for a particular frequency within its recommended operating range with the assurance that it will give excellent performance. Selection should be made, however, subject to the following qualification. It is generally advisable to select a choke with a resonant frequency (see chart) slightly higher than the desired operating frequency since any additional capacity to ground will tend to shift the resonant frequency closer to the operating frequency. Also, for this reason, the frequency designated by the catalog number of a choke is lower than its natural resonant frequency.

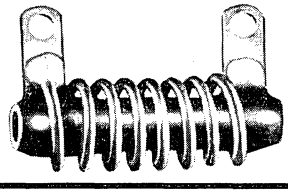
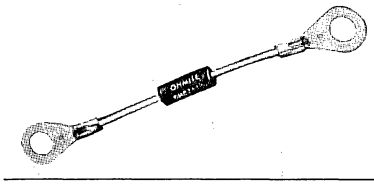
parasitic suppressor



The P-300 Suppressor is designed to prevent unwanted ultra-high-frequency parasitic oscillations which occur in the plate and grid leads of push-pull and parallel tube circuits. The P-300 is a non-inductive, 50 ohm, vitreous enameled resistor combined with a choke (in parallel) of .3 microhenries inductance and .003 ohms D.C. resistance. The two form a small integral unit only 1¾" long overall and 21/32" diameter. The unit may be mounted directly in the grid lead without extra support.

Model P-300 Wt. .04 lb. ..... Net 1-9 $1.66

diode metersaver protects meters



Designed to protect sensitive (high internal resistance) meters against burnout due to overload even where potential is reversed. Introduces negligible error. Consists of 2 silicon diodes in compact case with leads and lugs. Connects across meter terminals without regard for polarity. Shunts excess current around meters — for example, can convert 200 times overload to 3 times overload. Allows use of less expensive meter fuses. Can be used with meters of low internal resistance but use of series resistor is then recommended.

PRECISION CARBON FILM RESISTORS

proven quality resistors

Carbon Film Resistors are composed of a basic substrate of strong non-hygroscopic steatite to which is applied a coating of high stability carbon film. Units are processed at high temperature to insure stability and minimize aging and humidity effects. A protective coating of high temperature electrical varnish covers the resistance element. Special applications include resistive coating of custom forms, anti-corona provisions and numerous others. Military items presently include the several styles of Mil-R-14293.

POWER RATING

Power ratings shown are maximum ratings for free air operation at an ambient temperature of 25°C. They are based on an average operating temperature of approx. 110°C. The hot spot temperature may not exceed 120°C.

VOLTAGE RATINGS

Voltage ratings shown are maximum ratings based on safe gradient for element length operated in free air.

RESISTANCE TOLERANCE

Type B, D and E Standard Tolerance is ±15%. Tolerances of ±10%, ±5% and ±3% can be furnished at additional cost.

RESISTANCE VALUE NOMENCLATURE

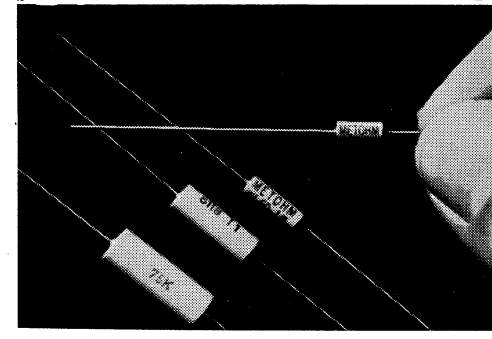
Metohm® RESISTORS
Metal Film Precision Type

THE STANDARD OF QUALITY FOR MILITARY AND INDUSTRIAL PURPOSES

FEATURES

- **High stability and reliability**
- **Designed to exceed MIL-R-10509F**
- **Close resistance tolerance**
- **Wide range of resistance values**
- **Stock or made-to-order types**
- **1/20, 1/10, 1/8, 1/4 and 1/2 watt sizes**

Exceeds MIL-R-10509F



In critical space-age electronic circuitry, METOHM metal film precision resistors guarantee high reliability, high stability, close accuracy, low TC and miniature size. Metohms are precision made under "white-room" conditions in the industry's most modern plant.

MIL SPECS. — All Metohm precision resistors are designed to exceed MIL-R-10509F char. C, D and E.

POWER RATING — is based on full rated load in an ambient of 125°C.

WELDABLE LEADS—gold plated Dumet leads and nickel "270" leads are available for weldable applications.

STOCK METOHMS — RN50, 55, 60, 65 and 70 Metohm resistors, char .C, TC Code T2 (±50PPM) are stocked in MIL standard values listed below. Standard tolerance is ±1%.

MADE-TO-ORDER TYPES — see data in accompanying tables for non-stock resistors available in production order quantities.

CONFORMAL COATED TYPES—also available in 1/20, 1/10, 1/8, 1/4 and 1/2 w. sizes. Durable solvent resistant coating allows smaller size. Ideal for micro module circuitry where space is at a premium.

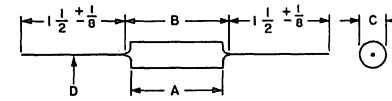
S-COAT RESISTORS
Silicone Precision Power Type

S-Coat resistor line represents the latest advance in silicone coated wire-wound power resistor design. S-Coat resistors are precision-made for precision applications requiring characteristics such as low TC, close tolerance, no noise, low drift, high O.L. capacity, vibration resistant and zero voltage coefficient. Order by Type Designation, Ohms and Accuracy if other than ±1%.

S-COAT FEATURES



- **Low TC: ± 20PPM**
- **Close accuracy: ±1% standard, to ±0.5% special**
- **1000 volt dielectric — "V" block test • Wide resistance ranges • 16 space-saving sizes**

ratings and sizes — **standard tolerance ± 1%**

variable resistors and trimmer potentiometers

Manufactured with precision craftsmanship for the INDUSTRIAL-MILITARY MARKET

PEC offers industrial and military electronic equipment manufacturers the most reliable variable resistors available today at **very competitive prices.**

Because of PEC's unique flexibility special items, as well as standards, can be produced with shorter delivery times and more attractive prices, than any other manufacturer can provide.

New hot molding manufacturing processes are applied to all PEC variable resistors. In a single production operation the resistance element is integrated with a low resistance collector, heavy gold plated terminals and an insulating base to form a sturdy, reliable one-piece subassembly, insensitive to thermal shock and vibration. The bridging contact brush is a single block of corrosion free carbon.

The resistance element of PEC trimmer pots is a specially developed metal glaze with **low temperature coefficient** and **low contact noise.**

PEC variable composition resistors and metal ceramic trimmer potentiometers meet or exceed the requirements of Mil-R-94 and Mil-R-22097.

All PEC variable resistors are designed for **broad spectrum reliability,** which means that combinations of actual physical and electrical stresses are applied during quality assurance testing in addition to the standard rotational and load life tests.

Recently completed rotational life tests document average resistance change of 3% after two million cycles under full load. (PEC type M, Style RV4)

A whole range of **"beyond-mil-specified"** tests are performed on a daily basis; these include; immersion in hot water, fixed current noise, rotational "audio" noise, output smoothness, and contact resistance variation tests.

Send for our multi-page catalog which provides complete specifications on PEC components.

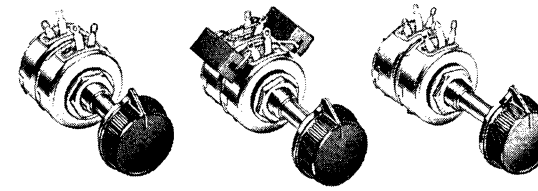
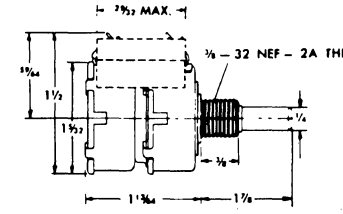
WL, WDT, WST Series



WL WDT WST

(Reduced Scale)



Centralab's constant impedance L-pads and Bridged T-pads are designed to provide the optimum in sound reproduction quality without altering the original frequency response of the equipment. Anti-backlash construction features a force-fit shaft interlock which prevents relative motion between contact springs of the front and rear units, thus assuring smooth attenuation in either direction without deterioration. The WST Series are linear taper twin controls for stereo speaker installations.

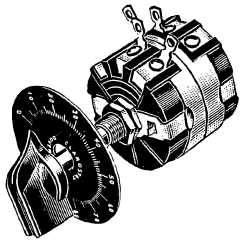
SOUND-SYSTEM CONTROLS

For proper control of volume and tone alike, Clarostat offers a choice of several controls, such as L- and T-pads, output attenuators, and individual-speaker volume controls as used for drive-in theatre installations. These are not ordinary radio controls but rather sound-system controls designed and built for critical requirements.

CONSTANT-IMPEDANCE CONTROLS



Self-compensating volume controls known as L-pads and T-pads for use in sound systems. Rated at 2½ watts DC, but will handle up to 10 watts audio. Continuous range from 0.5 to 30 decibels attenuation in 90% rotation. Last 10% affords infinite attenuation. With Clarostat constant-impedance L-pads and T-pads the input and output impedances of associated circuits can be kept within the limits of a constant required value. Knob and dial plate furnished with each control.

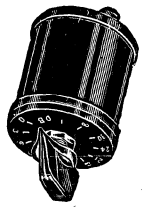
CONSTANT IMPEDANCE OUTPUT ATTENUATORS



Series "CIB" rated at 10 watts, but will handle up to 30 watts in audio circuit. Linear attenuation provided in 3 decibel steps up to 24db, then 30db followed by infinity. Equipped with dial plate and bar knob. One-hole mounting, ⅜" bushing diameter. 1" shaft. This control has been developed to meet the need for a constant-impedance attenuator capable of handling considerable power without measurable insertion loss. Recommended as an output level control for power amplifiers, or as an input attenuator for individual or for a group of speakers in a public address system.

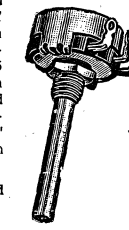
SPECIAL DRIVE-IN THEATRE L-PAD

To meet the needs of theater sound systems, more especially those of drive-in theaters, a special 8 ohm L-Pad is now available, containing two separate windings of 5 ohms and 40 ohms. Also 50 ohm linear rheostat and 35 ohm tapered rheostat, as listed. Units have ⅜-32 bushing ¾" long, and 1½" round shaft. (Knob furnished with each control).



Cat. No. CM8727-1 8 ohm L-Pad
Net Price $1.80

SPACE-SAVER CONSTANT-IMPEDANCE ATTENUATORS

Characterized by reduced depth and diameter, these attenuators are ideal for use in remote control of speakers since they are small enough to be installed in standard electrical boxes in the home, office, stockroom, etc.

These controls are rated 2 watts D.C., but will handle up to 4 watts of audio, depending upon the type signal being handled. (As the frequency becomes constant, wattage reduces to 2 watts or the same as the D.C. rating).

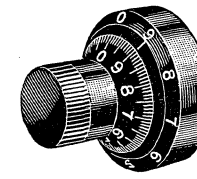
CLARODIALS

Ten-Turn Concentric Scale Dials



Calibrated dials designed for multi-turn potentiometers up to 10 turns or other rotary devices. CLARODIALS require only one inch of panel space. The knob attaches directly to the shaft, and the body of the dial is mounted rigidly to the panel. As a result, accurate readings with a ratio 1000:1 for ten turns are provided with zero backlash and no reading error. CLARODIALS are made of anodized aluminum for years of attractive use. Mounting requirements are ¼″ shaft and ⅜″-32 NEF-2A bushing. Adapters for ⅛″ dia. shafts are available.

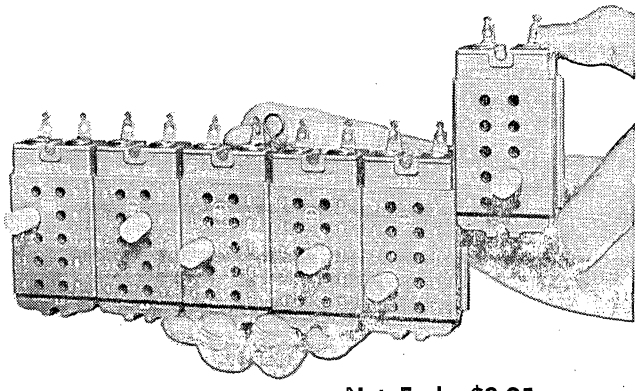
CLARO-DEC PRECISION RESISTANCE DECADE BOX

The most flexible innovation yet in precision resistance decade boxes, the Claro-Dec serves many applications with all the versatility needed for the job. Claro-Decs (within established parameters of current) are used whenever accurate steps of resistance values between .1 ohms and 900K ohms, ±1%* are required. Selection of desired steps of resistance is accomplished by insertion of a banana plug into the proper, marked front panel hole on the unit. Individual or multiple Claro-Dec units are flush panel or breadboard mounted with equal ease. Units may be physically ganged by sliding the molded-in tongue-and-groove together and electrically series connected with a supplied wire jumper or accessory banana plug.



Net Each: $3.95

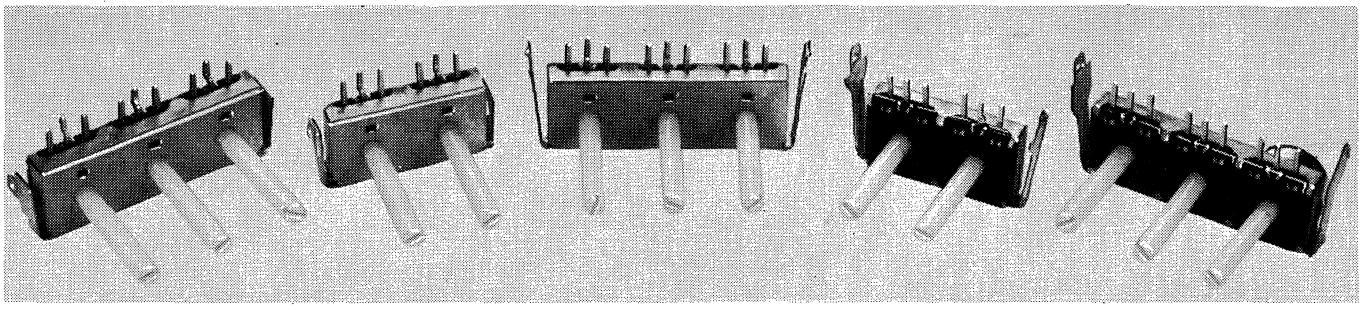
NEW! IRC-CTS STRIPTROL CONTROL REPLACEMENT SYSTEM

IRC, DIVISION OF TRW INC.



Here is a brand new replacement system which saves time and money on frequently hard-to-get TV controls.

Striptrol is a unique and modern method of providing exact replacement coverage of many often used side-by-side controls found in the majority of today's black-and-white and color TV receivers. Striptrol features simplicity of assembly and low inventory cost.

This entire replacement system stems from 3 basic components: elements, housings and adjustors. Striptrol is assembled using a combination of one or more of the three basic parts.

The total Striptrol line consists of a variety of elements with different values and tapers. Also included are eight housings, including both vertical and horizontal mounting styles, with and without power switches, and three adjustors covering both out-the-front, out-the-rear, and switch operating styles.

PROVIDES VERSATILITY AND EASE OF ASSEMBLY

SNAPTROL. Newest of three IRC replacement systems designed to provide servicing technicians with satisfactory replacements for comprehensive coverage of single controls, tandem dual controls, stereo controls and concentric dual controls for television, radio, auto sets and high fidelity equipment.

SNAPTROL provides a broad variety of basic, factory assembled control sections, shafts and switches which snap together to provide a wide selection of replacement controls. Literally, it is a "snap" to assemble nearly any standard or special control.

SERIES 45 INDUSTRIAL CONTROLS. With a variety of five basic control components, the Series 45 line permits quick assembly of 12,631,500 different control specifications. These include single, double, triple and quadruple section controls, with or without power switches, in all popular styles and ranges needed for industrial electronic equipment.

Series 45 components are completely compatible and interchangeable with SNAPTROL. Together, these two snap-together systems provide an almost unlimited means to furnish unusual and special controls for industrial applications.

EASY TO USE. Parts assemble into exact duplicate control in 15 to 30 seconds. Sections completely factory assembled. No shaft cutting or modification needed.

GREATER VERSATILITY. SNAPTROL provides new and unique designs which provide for better utility and adaptability of component parts:

1—**Interchangeable Control Mountings.** 3/8", 7/16" and 1/2" diameter bushings of varying lengths and bores, quickly thread into front control sections. Accommodates thick panel requirements *without* extra bushing or adjuster. Specially designed tab mounting plates or printed circuit brackets easily attached in place of bushings. This exclusive new design feature reduces the number of front sections needed and extends their use in a greater variety of replacement needs.

2—**Printed Circuit Terminals.** All carbon control sections are equipped with terminals that will handle both conventional and printed circuit wiring. This original IRC-CTS terminal design doubles the adaptability of control sections.

3—**Rotary or Pull-Push Power Switches.** Either type of power switch snaps onto either carbon Front or Rear Sections. Another exclusive IRC-CTS design feature which very considerably increases the utility of control components.

4—**Uniform Diameter Rear Section Shafts.** New design of rear section (inner) shafts provide uniform diameter — permits use of heavy-walled front section (outer) shaft contributing better concentric shaft operation and superior knob retention. Simple compression type adapter fits rear section shaft to knobs normally requiring larger diameter. No drilling or modification of knobs needed. Shafts are flatted or slotted as required — no shaft insert or tine needed! This new design reduces the number of exact length shafts required for broad replacement coverage.

5—**Front Sections Serve for Single Controls.** Without modification or adapters, all SNAPTROL front sections may be used for single control replacements. Provides practical use of single front section for special bushings, tab mountings, printed circuits, special shaft needs and a variety of power switches. No other section-type control system provides such broad versatility.

FEWER COMPONENT PARTS. Because of the realistic design features provided, SNAPTROL requires far fewer items of components than any other section-type exact duplicate control system which offers so broad a replacement coverage. (Over 2300 exact duplicate concentric dual controls and many thousands of single controls.)

BEST SELLING CONTROLS. SNAPTROL is a special replacement design of the world's most frequently specified and most widely sold CTS Series 45 control. Over 300,000,000 in current use — a strong testimony to the quality and performance of these outstanding controls.

CONTROL MOUNTINGS FOR FRONT SECTIONS

A variety of control mountings permit the use of SNAPTROL Front Sections for many different replacement controls. Bushings of varying diameters and inside bores thread into front sections. Tab mounting plates and printed circuit brackets attach to front section with special male nut supplied with each.

This exclusive design feature of selectable control mountings actually reduces inventory investment for distributors and servicing technicians. For a specific resistance value and taper, only one SNAPTROL Front Section is needed—in contrast to other systems where an additional front section is needed for *each* different control mounting.

CARBON & WIREWOUND REAR SECTIONS

Type CR Carbon Rear Sections and Type WR Wirewound Rear Sections snap onto SNAPTROL Front Sections for use as either concentric dual or tandem dual controls. Rotary or pull-push power switches snap onto CR sections. (WR sections do not accept switches.) Rear or inner concentric shafts snap into either type of rear sections for concentric dual operation. SS7A Intersection Insert provides tandem dual operation. Additional tandem sections may be snapped on by use of SS13 Multisection Couplers.

EXACT DUPLICATE SHAFTS

SNAPTROL Exact Duplicate Shafts are supplied to close tolerances against original control specifications. Easily snap into molded nylon rotors of front or rear sections. Uniform diameter of rear section (inner) shafts permit use of heavier wall on front section (outer) shafts providing better concentric rotation and superior knob fit. Knob Adapter (Stock No. KA1) fits rear (inner) shaft to knobs normally requiring larger diameter shafts. No drilling or modification of knobs is required. No cutting of shafts is needed with SNAPTROL Exact Duplicate Shafts! Easy to install!

IDENTIFY ANY OF 12,631,500 SERIES 45 CONTROLS WITH THIS SPECIFICATION NUMBER SELECTION CHART

Suppose triple controls are wanted with these specifications: 500K log taper panel section, 10-meg linear taper second section, 10K ohms linear taper third section, plus SPST switch and a 1½" split-knurled shaft. The specification number would be 45A504D106D103S20, derived from this chart as follows: 45 for Series 45, A504 for the panel section, D106 for the second and D103 for the third sections, S for SPST switch (symbol omitted if no switch wanted) and 20 for the desired shaft. Omit codes of unwanted features. Ex: 45D50116 for single control. This is a linear taper 500 ohm control with #16 shaft (2" full round), no switch.

IRC-CTS TYPE 4W CONTROLS AND BASE ELEMENTS

IRC, DIVISION OF TRW INC.

Types WPK and WPS are compact, 1¼" diameter wire wound controls available for replacement use in two popular shaft styles and an extensive variety of resistance values and tapers. Many stock numbers can be supplied as factory-assembled units. All stock numbers may be assembled in field using Base-Element with SK4 or SK5 Kit as desired.

Resistance elements are uniformly wound with highest grade alloy resistance wire on special form that withstands high temperature without shrinking. Pressure molded plastic housing is designed for maximum heat dissipation and accurate location of terminals. Contactor and collector are of long-wearing alloy that makes direct contact.

Resistance tolerance is ± 10%.

IRC-CTS CONCENTRIKIT® EXACT DUPLICATE SHAFT SPECIFICATIONS

IRC, DIVISION OF TRW INC.

EXACT DUPLICATE SHAFTS

Stock numbers and corresponding lengths are listed on these pages. In general, the last three numbers of the stock number indicates shaft length from control mounting face (not end of bushing) to end of shaft. Of the last three numbers, the first indicates number of inches and the second and third number indicates the number of 32nds. For Stock No. P1-210, length is $2\frac{10}{32}$" or $2\frac{5}{16}$". For inner shafts employed with K3 CONCENTRI-KIT, subtract $\frac{3}{32}$" from dimension indicated by stock number.

There is an IRC-CTS Exact Duplicate Shaft available for nearly every concentric dual control. These Outer and Inner Shafts require no modification. Shaft lengths are held within close limits to original shaft lengths. Careful attention is given to end trims for fit to original knobs. The specifications on this page provide dimensions and use.

IRC-CTS INDUSTRIAL Q CONTROLS

IRC, DIVISION OF TRW INC.

IRC ½ watt composition controls for industrial and commercial applications provide a wide selection of resistance values, tapers and shaft styles. Types PQ, RQ and RQL may be combined with Type M Multisections to provide broad variety of multiple-section controls.

TYPE PQ

Control has full round ¼″ shaft, extending approximately 3″ from mounting face, and with ⅜″ long bushing. ½ watt power rating, 500 volts maximum. It is available in 33 stock values.

TYPE RQ

Control has a very short screwdriver slot shaft of ¼″ diameter and approximately ½″ long from mounting face, with ⅜″ long bushing. ½ watt power rating. Supplied in 33 stock values.

Electrical rotation of these controls is the same with or without power switches (See Type Q Accessories, pages 1241 and 1242. Special platings of metal parts provide excellent appearance. Resistance tolrance of all units is ± 10%.

TYPE RQL

A 10% tolerance control with locking type bushing. Screwdriver slot shaft is ¼″ diameter and approximately ½″ long from mounting face, with a ⅜″ split type bushing, and locking nut. Supplied in 26 stock values. ½ watt power rating.

TYPE M MULTISECTIONS

IRC Type M Multisections are rear control sections which add to Types PQ, RQ, RQL or any Type Q control to provide multiple-section tandem controls. Supplied in 25 stock numbers as listed on opposite page. Resistance tolerance is ± 10%. See pages 1241 and 1242 for power switches and other accessories.

IRC-CTS SPECIAL PURPOSE CONTROLS

IRC, DIVISION OF TRW INC.

TV HEIGHT CONTROLS AVOID CALL-BACK INCONVENIENCES

USES:

This control is supplied for reliable replacement of TV Height Controls and other controls in B+CIRCUITS — such as AGC, NOISE GATE, FOCUS, FRINGE LOCK and SYNC controls — which have become unsatisfactory because of element etching due to voltages present in the particular circuitry.

FEATURES:

- Premium quality control (originally designed for rugged service in military gear)
- 1 watt rating, 750 V. max. between outer terminals
- Small size 15/16" diameter — same as most original controls
- Nylon shaft — slotted and knurled — easily shortened where required.

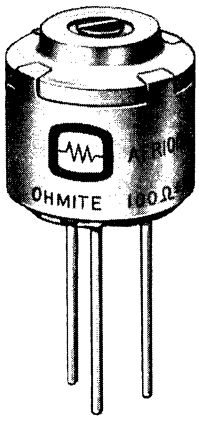
OHMITE hot molded single-turn trimmers

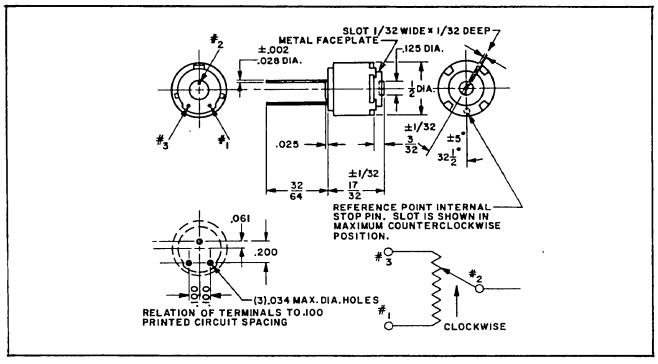
TYPE AFR — SINGLE TURN



OHMITE type AFR Trimmers are single-turn controls built to withstand severe environmental conditions. Their unique design includes a hot-molded resistor track bridged by a single moving molded contact brush. Resistance material, collector track material, insulation material and metal terminals are all molded together at one time into a single, solid, integral structure. There are no cracks or crevices to admit moisture.

Enclosure of the Ohmite type AFR is non-magnetic, corrosion resistant, and splash-proof. Type AFR Trimmers are designed for screwdriver adjustment. Fixed stops withstand a maximum shaft torque of 2 inch-pounds.

In excess of 50,000 operational cycles with low "noise" level initially — decreasing with use — can be expected in conventional applications.



CHARACTERISTICS:

Power Rating: ¼ watt @ +70° C ambient temperature. Derate power linearly to zero at +120° C ambient for resistance values to 0.5 megohms. Additional derating required for resistance values over 0.1 megohms at ambients higher than 70° C.

Resistance Range: 100 ohms to 5.0 megohms. Resistance change is nominally linear with shaft rotation.

Tolerance: ±20% standard.

Temperature Range: —55° C to +120° C.

Working Voltage: 350 volts, RMS, maximum.

Dielectric Strength: 750 VAC, RMS, at sea level.

Adjustment: Single turn, 295 ±5 degrees.

Torque: 0.25 to 3.0 inch-ounces.

Leads: Designed for mounting directly on printed wiring boards using the terminal leads which are spaced to fit the 0.1″ printed wiring board standard spacing.

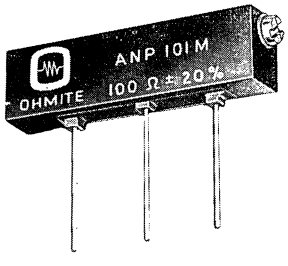
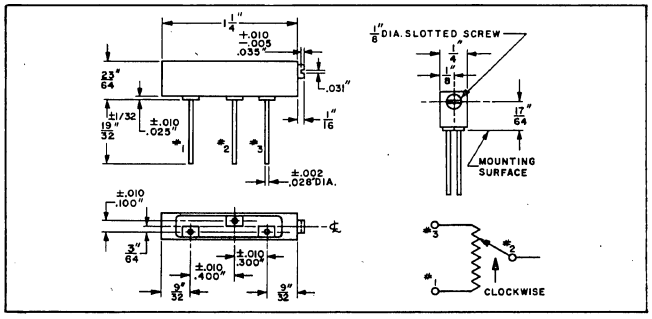
hot molded 25-turn trimmers

TYPE ANP — 25-TURN



Ohmite type ANP Hot-Molded Trimmers are continuously adjustable 25-turn variable resistors intended primarily for trimmer applications. Designed for use on printed circuit boards, these dependable three-terminal devices can be applied as either rheostats or potentiometers with equally satisfactory results. Stepless and relatively non-inductive regardless of resistance value. Unexcelled stability of setting in normal environmental conditions.

The type ANP Trimmer is produced by a hot-molding process using a high insulation material together with a hot molded resistance track, low resistance collector track and terminal pins — all combined into a single, solid, integral structure. The type ANP is splash-proof, dust-tight and can be mounted by its own rugged terminals.



CHARACTERISTICS:

Power Rating: ⅓ watt @ 50° C ambient temperature. Derate power linearly to zero at 100° C.

Resistance Range: 100 ohms to 0.1 megohms. Resistance change is nominally linear with shaft rotation.

Tolerance: Standard resistance tolerance is ±20%.

Temperature Range: —55° C to +100° C.

Working Voltage: 350 volts RMS, maximum at sea level.

Dielectric Strength: 700 volts RMS maximum, at sea level.

Insulation Resistance: 1000 megohms minimum.

Adjustment: 25 ± 3 turns for continuous resistance change. Mechanical release at end positions. Turning torque is 0.10 to 8 inches-ounce. Slotted for screwdriver adjustment.

Leads: Pin type terminals, spaced in accordance with 0.1″ printed wiring board grid system.

OHMITE vitreous enameled rheostats (potentiometers)

Now, Ohmite offers TWELVE sizes in its line of famous rheostats ranging from 7.5 to 1000 watts. Nothing to shrink or burn, all models are metal and ceramic construction and coated with Ohmite's exclusive vitreous enamel. The revolutionary Model C, 7½ watt miniature unit, **the smallest rheostat of its rating available,** employs this same construction! All Model C stock units and the enclosed Model E unit, are normally supplied in a corrosion-resistant dust-proof case. Model C units are stocked in both standard and locking type bushings.

In all Ohmite rheostats, the resistance wire is wound on a solid ceramic core. The turns are locked in place with tough, protective vitreous enamel. Pivoted, universal action mounting of the brush, assures perfect contact. Copper-graphite brushes (and on heavier current units, silver-graphite) prevent wear of the resistance track. Terminals at each end of the winding permit connection of the unit as a potentiometer.

Models H, J, G, K, L, P, and N, marked "Series A," are listed under the Underwriters' Laboratories Reexamination Service. RHEOSTAT KNOBS are listed on page 20. (Request Catalog 50 for rheostats to meet military specification, MIL-R-22).

RATINGS: Current ratings shown, assume use in free air. If units are enclosed, currents should be reduced to as much as 50% depending upon ventilation. The rated current causes the rheostat to dissipate its rated wattage when its full resistance is in the circuit.

SPECIAL RHEOSTAT FEATURES: Hundreds of features to meet your special rheostat requirements can be furnished. Submit your specifications.

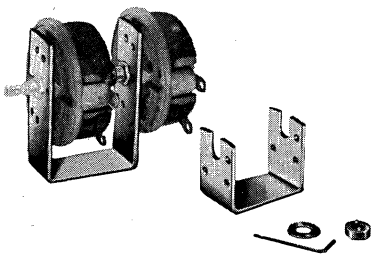
OHMITE rheostat tandem coupling kits



Tandem rheostat assemblies can be ordered from the factory or assembled by the user with these kits which permit assembly of two units. Each kit consists of a steel "U" frame, a coupling with set screw, mica washer, Allen wrench and instructions.

Rheostat shafts are joined by the coupling which is fastened to the shaft of the rear unit. Projections on the coupling fit a recess on the rear of the hub of the front unit.

Three kits are available as follows:

Cat. No. 6532—Mounts Models H or J, also accommodates Models H, J, G, K or L in rear position.

Cat. No. 6533—Mounts G, K or L units, also accommodates Models H, J, G, K or L in rear position.

Cat. No. 6591—Mounts Model E units only.

OHMITE molded composition potentiometers

AVAILABLE ONLY FROM OHMITE DISTRIBUTORS

Ohmite molded composition potentiometers are used in commercial and military electronic applications where high quality and dependable performance are important. Type AB is rated 2 watts at 70°C ambient and is available with 7/8" slotted shaft (CMU), 2" unslotted shaft (CU, CA, CB, CCU) and locking type bushing with slotted shaft (CLU). Type AS is a miniature unit rated ½ watt. It is available with locking type bushing and slotted shaft (Style AS) and standard bushing with longer (slotted) shaft for knob control (Style ASM).

Because the resistance element is a thick, solid-molded ring — not a sprayed film or paint-type resistor — longer life and smoother operation are obtained. This is due also to the molded composition contact. Units are dust and splash proof, fungus and corrosion resistant and meet the requirements of military specification MIL-R-94. Styles CMU, CLU, AS and ASM conform respectively to MIL-R-94, Styles RV4N, RV4L, RV6L and RV6N.

Styles and tapers are listed in table. Dimensions of all stock units are shown below. A SPST switch for single AB controls can be supplied (see below table).

APPLICATIONS

Ward Leonard Power Rheostats are especially suited for use in electronic and electrical circuits where gradual and positive resistance changes are essential.

Balanced contact arms, self-lubricating metal graphite contact shoes, and no backlash in the drive shaft combine to ensure uniform contact pressure and smooth operation.

The 12.5, 25, and 50 watt Type MP rheostats, designed and acceptance-tested to the requirements of MIL-R-22, are completely interchangeable with other suppliers' rheostats. The tiny yet exceptionally rugged 12.5 watt rheostat, recently added to Ward Leonard's line, will handle those special low-power requirements with ease.

Immediate shipment from Ward Leonard's vast and varied stock of power rheostats assures you of fast, on-time delivery.

OFF-THE-SHELF

DABURN TRANSISTOR HEAT SINKS and RETAINER CLIPS

IMMEDIATE DELIVERY

Transistor heat sinks made with beryllium oxide, which is unique among inorganic materials, insulates electrically like a ceramic, but conducts heat like a metal. Where electrical applications require both dielectric insulation and hi-heat transfer from device to chassis, only beryllium oxide (BeO) can provide a satisfactory solution to design problems. Heat generating devices will operate at higher power levels longer and more reliably, with beryllia cooling.

BERYLLIUM OXIDE HEAT SINKS OFFERS THESE ADVANTAGES:

Extremely resistant to shocks, vibration and moisture.

High resistivity — low dielectric loss

Increased transistor life and output

Freedom from outgassing, infinite shelf life

BERYLLIUM OXIDE FOR TRANSISTOR RETAINER CLIPS, HEAT DISSIPATION AND ELECTRICAL INSULATION

TRANSISTOR RETAINERS: Optimum thermal conductivity, with absolute electrical insulation reliability, is offered by spring clip transistor retainers. The retainers provide electrical isolation for the semiconductor by means of a disc of beryllium oxide ceramic brazed to the base of the beryllium copper retainer. Solid ceramic disc, in contrast to a thin insulating coating, is practically immune to loss of insulating value thru cracking, abrasion, chipping or other results of rough treatment in assembly. Heat transfer from the semiconductor to chassis or heat sink is not sacrificed since the high purity BeO has thermal conductivity to that of aluminum metal. Maximum soldering temperature —300°C.

DUAL DIODES

DIVISION OF TRW INC.

Attractive new SNAP PAK style package. Back of card contains complete replacement information.

DIODES. Universal selenium dual diodes for horizontal phase detectors and remote control in TV receivers. Also used in radio control devices for model planes, and other circuits. Available in four basic types.

The small size, economy, ease of installation and reliable construcion of the IRC dual selenium diodes make them ideal for many low-voltage, low-frequency applications. To suit them to various circuits, these dual diodes have either common-anode, common-cathode, or series form of internal connection. The cells in each unit are matched to assure electrical balance.

Alloy-plated leads facilitate soldering. No clamp or other mounting device is needed, since the three leads readily support this flyweight unit.

Designed for Long Life

Construction features include an integral heatsink and a "floating" spring that gives proper pre-load over the full operating temperature range. No paper, laminates or other material that might absorb moisture are used. Moisture-excluding materials cushion the active elements and isolate them from encapsulant.

Electrically Balanced and Noise Free

IRC processes each selenium cell to give it a smooth, uncontaminated surface and periphery with no fractures. This technique insures uniform current density over the entire cell area and prevents noisy, unreliable operation.

To indicate polarity, one corner of the case has a diagonal cutoff. This assures correct orientation of units in automated assembly, and allows use of both sight and touch to get proper polarity at manual assembly and inspection.

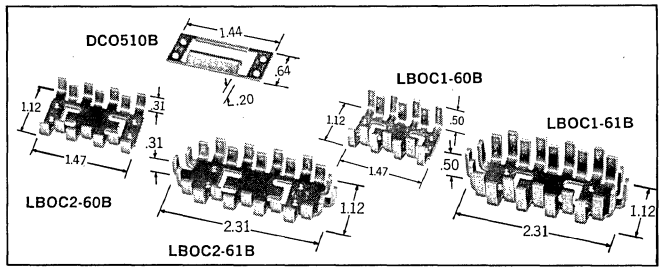
INSULUBE® 448 FINISH FOR HEAT DISSIPATORS

Insulube 448 is the only proven finish for positive electrical insulation in electronic equipment that meets the most stringent environmental requirements. Non-hygroscopic. High emissivity surface. Salt Spray resistant. Low thermal resistance. Unaffected by elevated temperature. High dielectric strength. High insulation resistance. Send for Bulletin 123.

MICROCIRCUIT PACKAGE DISSIPATORS



Models in this series consist of a retainer-clip, and/or dissipator. Retainer-clip may be used alone to mount the package to a conduction plane, or used with the dissipator in radiation/convection modes. In natural convection, the LBOC2-60B with clamp dissipates 3.6 watts with a case temperature rise of 103°C. The slightly larger LBOC2-61B with clamp dissipates 5 watts with the same case temperature rise. All models incorporate IERC's efficient, patented staggered-finger design. Send for Bulletin 151.

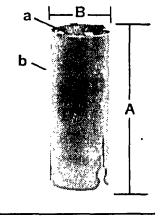
Heat dissipating electron tube shields

Tubes fail primarily because of the heat they generate and the environment in which they operate. If tubes are operated at a lower bulb temperature, their life can be greatly extended.

The simple solution to high tube temperature is IERC's heat dissipating tube shields shown below.

TRN THERMA-REL SERIES HEAT DISSIPATING SHIELDS



Gives you six times longer use of electronic equipment before failure; costs only a fraction of that of a replacement tube. Directly replaces the obsolete JAN shields. Flexible, black cadmium plated beryllium copper liner adapts to variations in bulb contour and diameter. Positive base attachment gives superior retention in shock and vibration environment. Meets or exceeds all military requirements for heat dissipating tube shields and is qualified to applicable military specifications.

Conservative 1 WATT RATING

Large 10 watt junction in a small package.

Cool Operation. Insulated case.

Mass-produced for LOW COST.

A mass-produced, large alloyed silicon junction has been placed into a small, rugged package to produce a zener diode with maximum surge capacity and stability. The low dynamic impedance assures superior performance in voltage regulators, clippers, surge protectors, and numerous other applications. An inner epoxy seal, long leakage paths, and high-pressure molding permits reliable operation in all environments.

CHARACTERISTICS AND MAXIMUM RATINGS:

Storage temperature: −65° to 150°C.
Operating temperature: −65° to 150°C.
Maximum junction temperature: 175°C.
Thermal resistance from junction to ambient: 10°C/mw (still air).
Forward drop at .5 amp.: 1.0V max.

SARKES TARZIAN

JEDEC Silicon Avalanche Rectifiers

All of the silicon rectifiers listed below are supplied with avalanche characteristics as standard. They are direct replacements, electrically and physically, for ordinary silicon rectifiers, yet they provide important benefits to you and your products, **at no** extra cost.

Overvoltage protection is built into the rectifier. Transient voltage induced failures are virtually eliminated because these units avalanche at voltages well below the destruction point. The overvoltage spike is dissipated through the junction at a point below the critical voltage stress across the edge of the junction.

Lower circuit costs are readily achieved. When avalanche rectifiers are used suppressor and balancing devices, such as resistors, capacitors, R-C networks, etc., are no longer needed. In addition, their elimination improves circuit reliability, due to a reduction in number of components and interconnections.

Dependable performance is assured. Over 20,000,000 of these devices already have been delivered and are in actual use in the field. They are now routinely available from high volume production lines.

All Tarzian Silicon Rectifiers are supplied with avalanche protection at no extra cost. For additional types, not necessarily covered by JEDEC numbers, see the following pages.

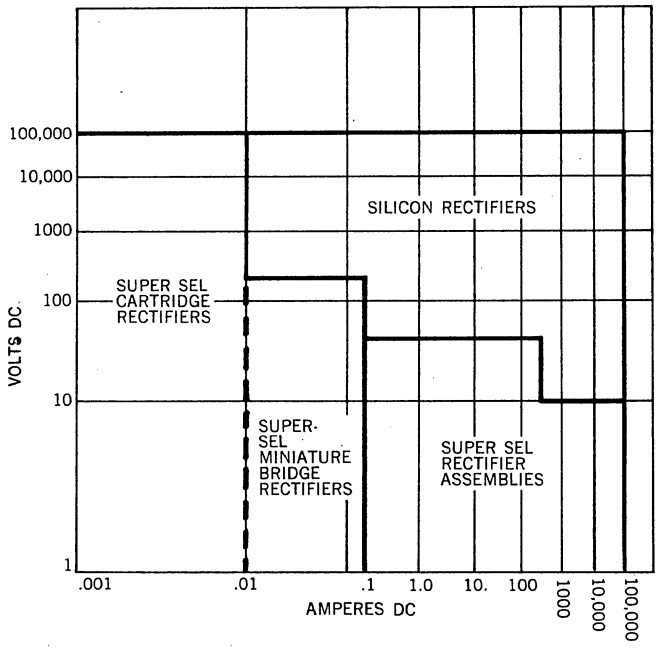
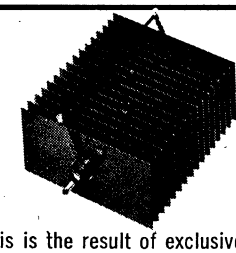
SARKES TARZIAN Super-Sel Rectifiers

Voltage and current conditions where "Super-Sel" is preferable to selicon.





Tarzian Super-Sel rectifiers have efficiency, aging, voltage regulation and thermal characteristics comparable to silicon types, yet they are smaller, cheaper and have far longer life than conventional selenium rectifiers. This is the result of exclusive doping techniques and the elimination of artificial barrier layers. Conductivity exceeds that of ordinary selenium at all current densities and improves further as the current density increases.

The inherent self-protection of selenium prevents damage from high voltage transients and overloads, both of which are disastrous to silicon types. Time required for the mass of the plate to reach critical temperature is measured in minutes whereas the same time, with silicon, is measured in microseconds. Pulse loads on these rectifiers can be 10 times the steady rating for a duty cycle of 3 sec. "on" every 4 minutes. Conversely, the overload capacity of silicon rectifiers is severely limited.

Super-Sel units can be used to advantage over both silicon and selenium types at **all** voltages to 10 ma load currents. They are superior in applications up to 120 ma dc to 200 volts, up to 500 amperes to 35 vdc and to 100,000 amperes at up to 10 volts. They also extend the ambient temperature range of selenium rectifiers to 90°C.

Super-Sel rectifiers are about ⅓ the size of conventional selenium assemblies of the same voltage and current rating while (affording higher) (extending the) maximum operating (temperature.) (temperature to 90°C.) Service life at 85°C. is approximately 100,000 hours — about 10 times as long as conventional selenium. Since output is not affected by aging, output voltage remains stable throughout the life of the unit.

An informative 18-page brochure with product and engineering data in Super-Sel rectifiers is available by writing Sarkes Tarzian.

RECTIFIERS

are grouped by half wave average current ratings. Ratings shown apply at case temperatures indicated. All surge ratings are peak one-half cycle currents at 60 cps. Surge ratings apply from full load. Voltage ratings shown are repetitive peak reverse maximum values. Most units have somewhat higher transient ratings. Reverse polarity JEDEC types are designated "'R". On non-JEDEC types, the second listing designates reverse polarity where available.
